## **Chapter 1**

# **Class Index**

### 1.1 Class List

Here are the classes, structs, unions and interfaces with brief descriptions:

coap_client_t
Client structure
coap_mem_t
Memory allocator structure
coap_msg_op
Option structure
coap_msg_op_list_t
Option linked-list structure
coap_msg_t
Message structure
coap_server
Server structure
coap_server_path
URI path structure
coap_server_path_list_t
URI path list structure
coap_server_trans
Transaction structure

2 Class Index

# Chapter 2

# File Index

### 2.1 File List

Here is a list of all documented files with brief descriptions:

lib/include/coap client.h	
Include file for the FreeCoAP client library	21
lib/include/coap ipv.h	
Include file for the FreeCoAP IP Version (IPv4/IPv6) abstraction layer	25
lib/include/coap_log.h	
Include file for the FreeCoAP logging module	26
lib/include/coap_mem.h	
Include file for the FreeCoAP memory allocator	29
lib/include/coap_msg.h	
Include file for the FreeCoAP message parser/formatter library	39
lib/include/coap_server.h	
Include file for the FreeCoAP server library	57
lib/src/coap_client.c	
Source file for the FreeCoAP client library	64
lib/src/coap_log.c	
Source file for the FreeCoAP logging module	67
lib/src/coap_mem.c	
Source file for the FreeCoAP memory allocator	70
lib/src/coap_msg.c	
Source file for the FreeCoAP message parser/formatter library	79
lib/src/coap_server.c	
Source file for the FreeCoAP server library	90

## **Chapter 3**

## **Class Documentation**

### 3.1 coap\_client\_t Struct Reference

#### Client structure.

```
#include <coap_client.h>
```

#### **Public Attributes**

- int sd
- int timer\_fd
- struct timespec timeout
- unsigned num\_retrans
- coap\_ipv\_sockaddr\_in\_t server\_sin
- socklen\_t server\_sin\_len
- char server\_host [COAP\_CLIENT\_HOST\_BUF\_LEN]
- char server\_port [COAP\_CLIENT\_PORT\_BUF\_LEN]
- coap\_client\_dtls\_state\_t state
- dtls\_context\_t \* ctx
- · session\_t sess
- dtls\_ecdsa\_key\_t ecdsa\_key
- const unsigned char \* ecdsa\_access\_x
- const unsigned char \* ecdsa\_access\_y
- unsigned ecdsa\_access\_num
- unsigned ecdsa\_size
- char \* app\_start
- size\_t app\_len

#### 3.1.1 Detailed Description

Client structure.

```
3.1.2 Member Data Documentation
3.1.2.1 size_t coap_client_t::app_len
Length of application data
3.1.2.2 char* coap_client_t::app_start
Start of application data
3.1.2.3 dtls_context_t* coap_client_t::ctx
DTLS context
3.1.2.4 unsigned coap_client_t::ecdsa_access_num
Number of entries in the ECDSA access control list
3.1.2.5 const unsigned char* coap_client_t::ecdsa_access_x
Buffer containing the x components of the ECDSA access control list
3.1.2.6 const unsigned char* coap_client_t::ecdsa_access_y
Buffer containing the y components of the ECDSA access control list
3.1.2.7 dtls_ecdsa_key_t coap_client_t::ecdsa_key
ECDSA keys
3.1.2.8 unsigned coap client t::ecdsa size
Size of an ECDSA component
3.1.2.9 unsigned coap_client_t::num_retrans
Current number of retransmissions
3.1.2.10 int coap_client_t::sd
```

Socket descriptor

 $3.1.2.11 \quad char\ coap\_client\_t::server\_host[\textbf{COAP\_CLIENT\_HOST\_BUF\_LEN}]$ 

String to hold the server host address

3.1.2.12 char coap\_client\_t::server\_port[COAP\_CLIENT\_PORT\_BUF\_LEN]

String to hold the server port number

3.1.2.13 coap\_ipv\_sockaddr\_in\_t coap\_client\_t::server\_sin

Socket structture

3.1.2.14 socklen\_t coap\_client\_t::server\_sin\_len

Socket structure length

3.1.2.15 session\_t coap\_client\_t::sess

DTLS session

3.1.2.16 coap\_client\_dtls\_state\_t coap\_client\_t::state

Current state of the DTLS session

3.1.2.17 struct timespec coap\_client\_t::timeout

Timeout value

3.1.2.18 int coap\_client\_t::timer\_fd

Timer file descriptor

The documentation for this struct was generated from the following file:

• lib/include/coap\_client.h

#### 3.2 coap\_mem\_t Struct Reference

Memory allocator structure.

#include <coap\_mem.h>

#### **Public Attributes**

- char \* buf
- size\_t num
- size\_t len
- char \* active

#### 3.2.1 Detailed Description

Memory allocator structure.

#### 3.2.2 Member Data Documentation

3.2.2.1 char\* coap\_mem\_t::active

Bitset marking active buffers

3.2.2.2 char\* coap\_mem\_t::buf

Pointer to an array of buffers

3.2.2.3 size\_t coap\_mem\_t::len

Length of each buffer

3.2.2.4 size\_t coap\_mem\_t::num

Number of buffers

The documentation for this struct was generated from the following file:

• lib/include/coap\_mem.h

### 3.3 coap\_msg\_op Struct Reference

Option structure.

#include <coap\_msg.h>

Collaboration diagram for coap\_msg\_op:

coap\_msg\_op 📩 next

#### **Public Attributes**

- unsigned num
- unsigned len
- char \* val
- struct coap\_msg\_op \* next

#### 3.3.1 Detailed Description

Option structure.

#### 3.3.2 Member Data Documentation

3.3.2.1 unsigned coap\_msg\_op::len

Option length

3.3.2.2 struct coap\_msg\_op\* coap\_msg\_op::next

Pointer to the next option structure in the list

3.3.2.3 unsigned coap\_msg\_op::num

Option number

3.3.2.4 char\* coap\_msg\_op::val

Pointer to a buffer containing the option value

The documentation for this struct was generated from the following file:

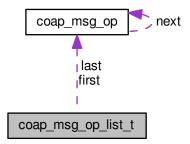

• lib/include/coap\_msg.h

#### 3.4 coap\_msg\_op\_list\_t Struct Reference

Option linked-list structure.

#include <coap\_msg.h>

Collaboration diagram for coap\_msg\_op\_list\_t:

#### **Public Attributes**

- coap\_msg\_op\_t \* first
- coap\_msg\_op\_t \* last

#### 3.4.1 Detailed Description

Option linked-list structure.

#### 3.4.2 Member Data Documentation

3.4.2.1 coap\_msg\_op\_t\* coap\_msg\_op\_list\_t::first

Pointer to the first option structure in the list

3.4.2.2 coap\_msg\_op\_t\* coap\_msg\_op\_list\_t::last

Pointer to the last option structure in the list

The documentation for this struct was generated from the following file:

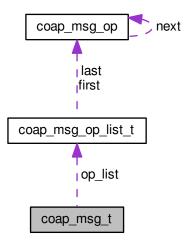

• lib/include/coap\_msg.h

#### 3.5 coap\_msg\_t Struct Reference

Message structure.

#include <coap\_msg.h>

Collaboration diagram for coap\_msg\_t:

#### **Public Attributes**

- · unsigned ver
- coap\_msg\_type\_t type
- unsigned token\_len
- unsigned code\_class
- unsigned code\_detail
- unsigned msg\_id
- char token [COAP\_MSG\_MAX\_TOKEN\_LEN]
- coap\_msg\_op\_list\_t op\_list
- char \* payload
- size\_t payload\_len

#### 3.5.1 Detailed Description

Message structure.

#### 3.5.2 Member Data Documentation

3.5.2.1 unsigned coap\_msg\_t::code\_class

Code class

3.5.2.2 unsigned coap\_msg\_t::code\_detail

Code detail

3.5.2.3 unsigned coap\_msg\_t::msg\_id

Message ID

3.5.2.4 coap\_msg\_op\_list\_t coap\_msg\_t::op\_list

Option list

3.5.2.5 char\* coap\_msg\_t::payload

Pointer to a buffer containing the payload

3.5.2.6 size\_t coap\_msg\_t::payload\_len

Length of the payload

3.5.2.7 char coap\_msg\_t::token[COAP\_MSG\_MAX\_TOKEN\_LEN]

Token value

3.5.2.8 unsigned coap\_msg\_t::token\_len

Token length

3.5.2.9 coap\_msg\_type\_t coap\_msg\_t::type

Message type

3.5.2.10 unsigned coap\_msg\_t::ver

CoAP version

The documentation for this struct was generated from the following file:

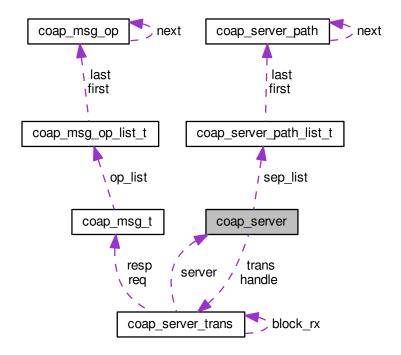

• lib/include/coap\_msg.h

### 3.6 coap\_server Struct Reference

Server structure.

#include <coap\_server.h>

Collaboration diagram for coap\_server:

#### **Public Attributes**

- int sd
- unsigned msg\_id
- coap\_server\_path\_list\_t sep\_list
- coap\_server\_trans\_t trans [COAP\_SERVER\_NUM\_TRANS]
- coap\_server\_trans\_handler\_t handle
- dtls\_ecdsa\_key\_t ecdsa\_key
- const unsigned char \* ecdsa\_access\_x
- const unsigned char \* ecdsa\_access\_y
- unsigned ecdsa\_access\_num
- unsigned ecdsa\_size

#### 3.6.1 Detailed Description

Server structure.

#### 3.6.2 Member Data Documentation

3.6.2.1 unsigned coap\_server::ecdsa\_access\_num

Number of entries in the ECDSA access control list

3.6.2.2 const unsigned char\* coap\_server::ecdsa\_access\_x

Buffer containing the x components of the ECDSA access control list

3.6.2.3 const unsigned char\* coap\_server::ecdsa\_access\_y

Buffer containing the y components of the ECDSA access control list

3.6.2.4 dtls\_ecdsa\_key\_t coap\_server::ecdsa\_key

ECDSA keys

3.6.2.5 unsigned coap\_server::ecdsa\_size

Size of an ECDSA component

3.6.2.6 coap\_server\_trans\_handler\_t coap\_server::handle

Call-back function to handle requests and generate responses

3.6.2.7 unsigned coap\_server::msg\_id

Last message ID value used in a response message

3.6.2.8 int coap\_server::sd

Socket descriptor

3.6.2.9 coap\_server\_path\_list\_t coap\_server::sep\_list

List of URI paths that require separate responses

3.6.2.10 coap\_server\_trans\_t coap\_server::trans[COAP\_SERVER\_NUM\_TRANS]

Array of transaction structures

The documentation for this struct was generated from the following file:

• lib/include/coap\_server.h

#### 3.7 coap\_server\_path Struct Reference

URI path structure.

#include <coap\_server.h>

Collaboration diagram for coap\_server\_path:

#### **Public Attributes**

- char \* str
- struct coap\_server\_path \* next

#### 3.7.1 Detailed Description

URI path structure.

#### 3.7.2 Member Data Documentation

3.7.2.1 struct coap\_server\_path\* coap\_server\_path::next

Pointer to the next URI path structure in the list

3.7.2.2 char\* coap\_server\_path::str

String containing a path

The documentation for this struct was generated from the following file:

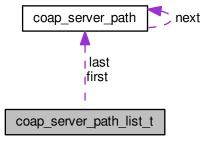

• lib/include/coap\_server.h

#### 3.8 coap\_server\_path\_list\_t Struct Reference

URI path list structure.

```
#include <coap_server.h>
```

Collaboration diagram for coap\_server\_path\_list\_t:

#### **Public Attributes**

- coap\_server\_path\_t \* first
- coap\_server\_path\_t \* last

#### 3.8.1 Detailed Description

URI path list structure.

#### 3.8.2 Member Data Documentation

3.8.2.1 coap\_server\_path\_t\* coap\_server\_path\_list\_t::first

Pointer to the first URI path structure in the list

3.8.2.2 coap\_server\_path\_t\* coap\_server\_path\_list\_t::last

Pointer to the last URI path structure in the list

The documentation for this struct was generated from the following file:

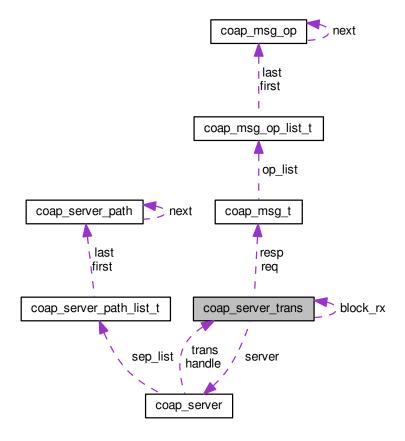

• lib/include/coap\_server.h

#### 3.9 coap\_server\_trans Struct Reference

Transaction structure.

#include <coap\_server.h>

Collaboration diagram for coap\_server\_trans:

#### **Public Attributes**

- · int active
- · coap\_server\_trans\_type\_t type
- time\_t last\_use
- int timer\_fd
- struct timespec timeout
- unsigned num\_retrans
- coap\_ipv\_sockaddr\_in\_t client\_sin
- socklen\_t client\_sin\_len
- char client\_addr [COAP\_SERVER\_ADDR\_BUF\_LEN]
- coap\_msg\_t req
- coap\_msg\_t resp
- char \* body
- size\_t body\_len
- · size\_t body\_end
- unsigned block1\_size
- unsigned block2\_size
- size\_t block1\_next
- size\_t block2\_next
- char block\_uri [COAP\_MSG\_OP\_URI\_PATH\_MAX\_LEN+1]
- · coap\_msg\_success\_t block\_detail
- coap\_server\_trans\_handler\_t block\_rx
- struct coap\_server \* server
- · coap\_server\_dtls\_state\_t state
- dtls\_context\_t \* ctx
- session\_t sess
- char \* app\_start
- size\_t app\_len

#### 3.9.1 Detailed Description

Transaction structure.

#### 3.9.2 Member Data Documentation

3.9.2.1 int coap\_server\_trans::active

Flag to indicate if this transaction structure contains valid data

3.9.2.2 size\_t coap\_server\_trans::app\_len

Length of application data

3.9.2.3 char\* coap\_server\_trans::app\_start

Start of application data

```
3.9.2.4 size_t coap_server_trans::block1_next
Byte offset of the next block in the request
3.9.2.5 unsigned coap_server_trans::block1_size
Block1 size for blockwise transfers
3.9.2.6 size_t coap_server_trans::block2_next
Byte offset of the next block in the response
3.9.2.7 unsigned coap_server_trans::block2_size
Block2 size for blockwise transfers
3.9.2.8 coap_msg_success_t coap_server_trans::block_detail
Code detail for a PUT or POST blockwise operation
3.9.2.9 coap server trans handler t coap_server_trans::block_rx
User-supplied callback function to be called when the body of a blockwise transfer has been fully received
3.9.2.10 char coap_server_trans::block_uri[COAP_MSG_OP_URI_PATH_MAX_LEN+1]
The URI for the current blockwise transfer
3.9.2.11 char* coap_server_trans::body
Pointer to a buffer for blockwise transfers
3.9.2.12 size_t coap_server_trans::body_end
Amount of relevant data in the buffer for blockwise transfers
3.9.2.13 size_t coap_server_trans::body_len
```

Length of the buffer for blockwise transfers

3.9.2.14 char coap\_server\_trans::client\_addr[COAP\_SERVER\_ADDR\_BUF\_LEN] String to hold the client address 3.9.2.15 coap\_ipv\_sockaddr\_in\_t coap\_server\_trans::client\_sin Socket structure 3.9.2.16 socklen\_t coap\_server\_trans::client\_sin\_len Socket structure length 3.9.2.17 dtls\_context\_t\* coap\_server\_trans::ctx DTLS context 3.9.2.18 time\_t coap\_server\_trans::last\_use The time that this transaction structure was last used 3.9.2.19 unsigned coap\_server\_trans::num\_retrans Current number of retransmissions 3.9.2.20 coap\_msg\_t coap\_server\_trans::req Last request message received for this transaction 3.9.2.21 coap\_msg\_t coap\_server\_trans::resp Last response message sent for this transaction 3.9.2.22 struct coap\_server\* coap\_server\_trans::server Pointer to the containing server structure

Generated by Doxygen

DTLS session

3.9.2.23 session\_t coap\_server\_trans::sess

3.9.2.24 coap\_server\_dtls\_state\_t coap\_server\_trans::state

Current state of the DTLS session

3.9.2.25 struct timespec coap\_server\_trans::timeout

Timeout value

3.9.2.26 int coap\_server\_trans::timer\_fd

Timer file descriptor

3.9.2.27 coap\_server\_trans\_type\_t coap\_server\_trans::type

Transaction type

The documentation for this struct was generated from the following file:

• lib/include/coap\_server.h

# **Chapter 4**

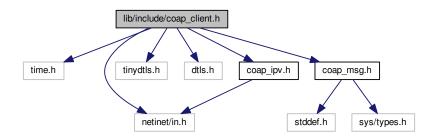

# **File Documentation**

# 4.1 lib/include/coap\_client.h File Reference

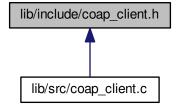

Include file for the FreeCoAP client library.

```
#include <time.h>
#include <netinet/in.h>
#include "tinydtls.h"
#include "dtls.h"
#include "coap_msg.h"
#include "coap_ipv.h"
```

Include dependency graph for coap\_client.h:

This graph shows which files directly or indirectly include this file:

### Classes

struct coap\_client\_t

Client structure.

### **Macros**

- #define COAP\_CLIENT\_HOST\_BUF\_LEN 128
- #define COAP\_CLIENT\_PORT\_BUF\_LEN 8
- #define coap\_client\_dtls\_get\_state(client) ((client)->state)

### **Enumerations**

 enum coap\_client\_dtls\_state\_t { COAP\_CLIENT\_DTLS\_UNCONNECTED = 0, COAP\_CLIENT\_DTLS\_C← ONNECTED, COAP\_CLIENT\_DTLS\_ALERT }

Client DTLS state enumeration.

### **Functions**

 int coap\_client\_create (coap\_client\_t \*client, const char \*host, const char \*port, const unsigned char \*ecdsa\_priv\_key, const unsigned char \*ecdsa\_pub\_key\_x, const unsigned char \*ecdsa\_pub\_key\_y, const unsigned char \*ecdsa\_access\_x, const unsigned char \*ecdsa\_access\_y, unsigned ecdsa\_access\_num, unsigned ecdsa\_size)

Initialise a client structure.

void coap client destroy (coap client t \*client)

Deinitialise a client structure.

int coap\_client\_exchange (coap\_client\_t \*client, coap\_msg\_t \*req, coap\_msg\_t \*resp)

Send a request to the server and receive the response.

• ssize\_t coap\_client\_exchange\_blockwise (coap\_client\_t \*client, coap\_msg\_t \*req, coap\_msg\_t \*resp, unsigned block1\_size, unsigned block2\_size, char \*body, size\_t body\_len, int have\_resp)

Exchange with the server using blockwise transfers.

### 4.1.1 Detailed Description

Include file for the FreeCoAP client library.

### 4.1.2 Macro Definition Documentation

4.1.2.1 #define coap\_client\_dtls\_get\_state( client ) ((client)->state)

Get DTLS state

4.1.2.2 #define COAP\_CLIENT\_HOST\_BUF\_LEN 128

Buffer length for host addresses

4.1.2.3 #define COAP\_CLIENT\_PORT\_BUF\_LEN 8

Buffer length for port numbers

### 4.1.3 Enumeration Type Documentation

4.1.3.1 enum coap\_client\_dtls\_state\_t

Client DTLS state enumeration.

### Enumerator

COAP\_CLIENT\_DTLS\_UNCONNECTED DTLS session is not active

COAP\_CLIENT\_DTLS\_CONNECTED DTLS session is active

COAP\_CLIENT\_DTLS\_ALERT A DTLS alert message was received from the server

### 4.1.4 Function Documentation

4.1.4.1 int coap\_client\_create ( coap\_client\_t \* client, const char \* host, const char \* port, const unsigned char \* ecdsa\_priv\_key, const unsigned char \* ecdsa\_pub\_key\_x, const unsigned char \* ecdsa\_pub\_key\_y, const unsigned char \* ecdsa\_access\_num, unsigned ecdsa\_size )

Initialise a client structure.

### **Parameters**

out	client	Pointer to a client structure	
in	host	Pointer to a string containing the host address of the server	
in	in port Port number of the server		
in	ecdsa_priv_key  Buffer containing the ECDSA private key		
in	in ecdsa_pub_key_x Buffer containing the x component of the ECDSA public key		
in	in ecdsa_pub_key_y Buffer containing the y component of the ECDSA public key		
in	ecdsa_access_x  Buffer containing the x components of the ECDSA access cont		
in	ecdsa_access_y  Buffer containing the y components of the ECDSA access contr		
in	ecdsa_access_num	ecdsa_access_num  Number of entries in the ECDSA access control list	
in	in ecdsa_size Size of an ECDSA component		

### Returns

Operation status

#### Return values

0	Success
<0	Error

4.1.4.2 void coap\_client\_destroy ( coap\_client\_t \* client )

Deinitialise a client structure.

#### **Parameters**

in,out <i>clie</i>	Pointer to a client structur	е
--------------------	------------------------------	---

4.1.4.3 int coap\_client\_exchange (  $coap\_client\_t * client$ ,  $coap\_msg\_t * req$ ,  $coap\_msg\_t * resp$  )

Send a request to the server and receive the response.

This function sets the message ID and token fields of the request message overriding any values set by the calling function.

### **Parameters**

in,out	client	Pointer to a client structure
in	req	Pointer to the request message
out	resp	Pointer to the response message

### Returns

Operation status

#### Return values

0	Success
<0	Error

4.1.4.4 ssize\_t coap\_client\_exchange\_blockwise ( coap\_client\_t \* client, coap\_msg\_t \* req, coap\_msg\_t \* resp, unsigned block1\_size, unsigned block2\_size, char \* body, size\_t body\_len, int have\_resp )

Exchange with the server using blockwise transfers.

The calling application should not pass in a request message that contains a block1 or block2 option. This function will add block1 and block2 options internally. This function sets the message ID and token fields of the request message overriding any values set by the calling function.

in, out	client	Pointer to a client structure	
in	req Pointer to the request message		
out	resp Pointer to the response message		
in	block1_size	e Block1 size	
in	block2_size	ock2_size Block2 size	
in	body	Pointer to a buffer to hold the body	
in	body_len		
in	have_resp		

### Returns

Operation status

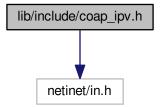

### Return values

>=0	Length of the data received
<0	Error

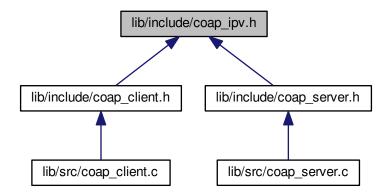

# 4.2 lib/include/coap\_ipv.h File Reference

Include file for the FreeCoAP IP Version (IPv4/IPv6) abstraction layer.

#include <netinet/in.h>
Include dependency graph for coap\_ipv.h:

This graph shows which files directly or indirectly include this file:

### **Macros**

- #define COAP\_IPV\_AF\_INET AF\_INET
- #define COAP\_IPV\_INET\_ADDRSTRLEN INET\_ADDRSTRLEN
- #define COAP\_IPV\_SIN\_ADDR sin\_addr
- #define COAP\_IPV\_SIN\_PORT sin\_port

### **Typedefs**

typedef struct sockaddr\_in coap\_ipv\_sockaddr\_in\_t

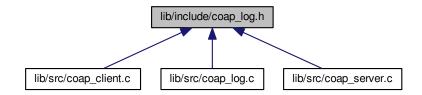

### 4.2.1 Detailed Description

Include file for the FreeCoAP IP Version (IPv4/IPv6) abstraction layer.

### 4.3 lib/include/coap\_log.h File Reference

Include file for the FreeCoAP logging module.

This graph shows which files directly or indirectly include this file:

### Macros

#define COAP\_LOG\_DEF\_LEVEL COAP\_LOG\_ERROR

### **Enumerations**

```
    enum coap_log_level_t {
        COAP_LOG_ERROR = 0, COAP_LOG_WARN = 1, COAP_LOG_NOTICE = 2, COAP_LOG_INFO = 3,
        COAP_LOG_DEBUG = 4 }
        Log level.
```

### **Functions**

```
void coap_log_set_level (coap_log_level_t level)

Set the log level.
coap_log_level_t coap_log_get_level (void)

Get the log level.
```

void coap\_log\_error (const char \*msg,...)

Log an error message.

void coap\_log\_warn (const char \*msg,...)

Log a warning message.

void coap\_log\_notice (const char \*msg,...)

Log an notice message.

• void coap\_log\_info (const char \*msg,...)

Log an info message.

void coap\_log\_debug (const char \*msg,...)

Log a debug message.

### 4.3.1 Detailed Description

Include file for the FreeCoAP logging module.

### 4.3.2 Macro Definition Documentation

4.3.2.1 #define COAP\_LOG\_DEF\_LEVEL COAP\_LOG\_ERROR

Default log level

### 4.3.3 Enumeration Type Documentation

4.3.3.1 enum coap\_log\_level\_t

Log level.

Enumerator

```
COAP_LOG_ERROR Error log level
COAP_LOG_WARN Warning log level
COAP_LOG_NOTICE Notice log level
COAP_LOG_INFO Informational log level
COAP_LOG_DEBUG Debug log level
```

### 4.3.4 Function Documentation

4.3.4.1 void coap\_log\_debug ( const char \* msg, ... )

Log a debug message.

### **Parameters**

in	msg	g String containing format specifiers	
in		arguments for the format specifiers	

4.3.4.2 void coap\_log\_error ( const char \* msg, ... )

Log an error message.

### **Parameters**

	in	msg	String containing format specifiers	
ĺ	in		arguments for the format specifiers	

4.3.4.3 coap\_log\_level\_t coap\_log\_get\_level ( void )

Get the log level.

### Returns

The current log level

4.3.4.4 void coap\_log\_info ( const char \* msg, ... )

Log an info message.

### **Parameters**

in	msg	String containing format specifiers arguments for the format specifiers	
in			

4.3.4.5 void coap\_log\_notice ( const char \* msg, ... )

Log an notice message.

### **Parameters**

in	msg	String containing format specifiers	
in		arguments for the format specifiers	

4.3.4.6 void coap\_log\_set\_level ( coap\_log\_level\_t level )

Set the log level.

Messages with a severity below this level will be filtered. Error messages cannot be filtered.

### **Parameters**

in	level	The new log level
----	-------	-------------------

- < Warning log level
- < Notice warning level
- < Informational warning level
- < Debug warning level

4.3.4.7 void coap\_log\_warn ( const char \* msg, ... )

Log a warning message.

### **Parameters**

	in	msg	String containing format specifiers
in			arguments for the format specifiers

## 4.4 lib/include/coap\_mem.h File Reference

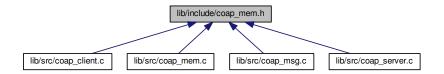

Include file for the FreeCoAP memory allocator.

#include <stddef.h>

Include dependency graph for coap\_mem.h:

This graph shows which files directly or indirectly include this file:

### Classes

· struct coap\_mem\_t

Memory allocator structure.

### **Macros**

- #define coap\_mem\_get\_buf(mem) ((mem)->buf)
- #define coap\_mem\_get\_num(mem) ((mem)->num)
- #define coap\_mem\_get\_len(mem) ((mem)->len)
- #define coap\_mem\_get\_active(mem) ((mem)->active)
- #define coap\_mem\_get\_active\_len(mem) ((mem)->num >> 3)

### **Functions**

int coap\_mem\_create (coap\_mem\_t \*mem, size\_t num, size\_t len)

Initialise a memory allocator structure.

void coap\_mem\_destroy (coap\_mem\_t \*mem)

Deinitialise a memory allocator structure.

void \* coap\_mem\_alloc (coap\_mem\_t \*mem, size\_t len)

Allocate a buffer from a memory allocator.

void coap\_mem\_free (coap\_mem\_t \*mem, void \*buf)

Return a buffer back to a memory allocator.

• int coap\_mem\_small\_create (size\_t num, size\_t len)

Initialise the small memory allocator.

void coap\_mem\_small\_destroy (void)

Deinitialise the small memory allocator.

char \* coap\_mem\_small\_get\_buf (void)

Get the array of buffers in the small memory allocator.

size\_t coap\_mem\_small\_get\_num (void)

Get the number of buffers in the small memory allocator.

• size\_t coap\_mem\_small\_get\_len (void)

Get the length of each buffer in the small memory allocator.

size\_t coap\_mem\_small\_get\_active\_len (void)

Get the length of the active bitset from the small memory allocator.

char \* coap mem small get active (void)

Get the active bitset from the small memory allocator.

void \* coap\_mem\_small\_alloc (size\_t len)

Allocate a buffer from the small memory allocator.

void coap\_mem\_small\_free (void \*buf)

Return a buffer back to the small memory allocator.

int coap\_mem\_medium\_create (size\_t num, size\_t len)

Initialise the medium memory allocator.

void coap\_mem\_medium\_destroy (void)

Deinitialise the medium memory allocator.

char \* coap\_mem\_medium\_get\_buf (void)

Get the array of buffers in the medium memory allocator.

size\_t coap\_mem\_medium\_get\_num (void)

Get the number of buffers in the medium memory allocator.

size\_t coap\_mem\_medium\_get\_len (void)

Get the length of each buffer in the medium memory allocator.

size\_t coap\_mem\_medium\_get\_active\_len (void)

Get the length of the active bitset from the medium memory allocator.

char \* coap mem medium get active (void)

Get the active bitset from the medium memory allocator.

void \* coap mem medium alloc (size t len)

Allocate a buffer from the medium memory allocator.

void coap\_mem\_medium\_free (void \*buf)

Return a buffer back to the medium memory allocator.

• int coap\_mem\_large\_create (size\_t num, size\_t len)

Initialise the large memory allocator.

void coap\_mem\_large\_destroy (void)

Deinitialise the large memory allocator.

char \* coap\_mem\_large\_get\_buf (void)

Get the array of buffers in the large memory allocator.

size\_t coap\_mem\_large\_get\_num (void)

Get the number of buffers in the large memory allocator.

size\_t coap\_mem\_large\_get\_len (void)

Get the length of each buffer in the large memory allocator.

size\_t coap\_mem\_large\_get\_active\_len (void)

Get the length of the active bitset from the large memory allocator.

char \* coap\_mem\_large\_get\_active (void)

Get the active bitset from the large memory allocator.

void \* coap\_mem\_large\_alloc (size\_t len)

Allocate a buffer from the large memory allocator.

void coap\_mem\_large\_free (void \*buf)

Return a buffer back to the large memory allocator.

• int coap\_mem\_all\_create (size\_t small\_num, size\_t small\_len, size\_t medium\_num, size\_t medium\_len, size\_t large\_num, size\_t large\_len)

Initialise all memory allocators.

void coap\_mem\_all\_destroy (void)

Deinitialise all memory allocators.

#### 4.4.1 Detailed Description

Include file for the FreeCoAP memory allocator.

### 4.4.2 Macro Definition Documentation

4.4.2.1 #define coap\_mem\_get\_active( mem ) ((mem)->active)

Get the active bitset from a memory allocator

4.4.2.2 #define coap\_mem\_get\_active\_len( mem ) ((mem)->num >> 3)

Get the length of the active bitset from a memory allocator

4.4.2.3 #define coap\_mem\_get\_buf( mem ) ((mem)->buf)

Get the array of buffers in a memory allocator

4.4.2.4 #define coap\_mem\_get\_len( mem ) ((mem)->len)

Get the length of each buffer in a memory allocator

4.4.2.5 #define coap\_mem\_get\_num( mem ) ((mem)->num)

Get the number of buffers in a memory allocator

### 4.4.3 Function Documentation

4.4.3.1 int coap\_mem\_all\_create ( size\_t small\_num, size\_t small\_len, size\_t medium\_num, size\_t medium\_len, size\_t large\_num, size\_t large\_len )

Initialise all memory allocators.

#### **Parameters**

in	small_num	Number of small buffers
in	small_len	Length of each small buffer
in	medium_num	Number of medium buffers
in	medium_len	Length of each medium buffer
in	large_num	Number of large buffers
in	large_len	Length of each large buffer

### Returns

Operation status

### Return values

0	Success
<0	Error

4.4.3.2 void\* coap\_mem\_alloc ( coap\_mem\_t \* mem, size\_t len )

Allocate a buffer from a memory allocator.

### **Parameters**

in,out	mem	Pointer to a memory allocator
in	len	Length of the buffer

### Returns

Pointer to a buffer or NULL

4.4.3.3 int coap\_mem\_create (  $coap\_mem\_t*mem$ ,  $size\_t$  num,  $size\_t$  len )

Initialise a memory allocator structure.

### Parameters

out	mem	Pointer to a memory allocator
in	num	Number of buffers
in	len	Length of each buffer

### Returns

Operation status

### Return values

0	Success
<0	Error

4.4.3.4 void coap\_mem\_destroy (  $coap_mem_t * mem$  )

Deinitialise a memory allocator structure.

in,out	mem	Pointer to a memory allocator

4.4.3.5 void coap\_mem\_free (  $coap_mem_t * mem$ , void \* buf )

Return a buffer back to a memory allocator.

### **Parameters**

in,out	mem	Pointer to a memory allocator
in	buf	Pointer to a buffer

4.4.3.6 void\* coap\_mem\_large\_alloc ( size\_t len )

Allocate a buffer from the large memory allocator.

### **Parameters**

in	len	Length of the buffer
----	-----	----------------------

### Returns

Pointer to a buffer or NULL

4.4.3.7 int coap\_mem\_large\_create ( size\_t num, size\_t len )

Initialise the large memory allocator.

### Parameters

in	num	Number of buffers
in	len	Length of each buffer

### Returns

Operation status

### Return values

0	Success
<0	Error

4.4.3.8 void coap\_mem\_large\_free ( void \* buf )

Return a buffer back to the large memory allocator.

#### **Parameters**

in	buf	Pointer to a buffer

```
4.4.3.9 char* coap_mem_large_get_active (void)
```

Get the active bitset from the large memory allocator.

Returns

the active bitset from the large memory allocator

```
4.4.3.10 size_t coap_mem_large_get_active_len ( void )
```

Get the length of the active bitset from the large memory allocator.

Returns

Length of the active bitset from the large memory allocator

```
4.4.3.11 char* coap_mem_large_get_buf ( void )
```

Get the array of buffers in the large memory allocator.

Returns

Pointer to the array of buffers

```
4.4.3.12 size_t coap_mem_large_get_len ( void )
```

Get the length of each buffer in the large memory allocator.

Returns

Length of each buffer

```
4.4.3.13 size_t coap_mem_large_get_num ( void )
```

Get the number of buffers in the large memory allocator.

Returns

Number of buffers

```
4.4.3.14 void* coap_mem_medium_alloc ( size_t len )
```

Allocate a buffer from the medium memory allocator.

### **Parameters**

in	len	Length of the buffer
----	-----	----------------------

### Returns

Pointer to a buffer or NULL

4.4.3.15 int coap\_mem\_medium\_create ( size\_t num, size\_t len )

Initialise the medium memory allocator.

### **Parameters**

in	num	Number of buffers
in	len	Length of each buffer

### Returns

Operation status

### Return values

0	Success
<0	Error

4.4.3.16 void coap\_mem\_medium\_free ( void \* buf )

Return a buffer back to the medium memory allocator.

### Parameters

in	buf	Pointer to a buffer

4.4.3.17 char\* coap\_mem\_medium\_get\_active (void)

Get the active bitset from the medium memory allocator.

### Returns

the active bitset from the medium memory allocator

```
4.4.3.18 size_t coap_mem_medium_get_active_len ( void )
```

Get the length of the active bitset from the medium memory allocator.

Returns

Length of the active bitset from the medium memory allocator

```
4.4.3.19 char* coap_mem_medium_get_buf ( void )
```

Get the array of buffers in the medium memory allocator.

Returns

Pointer to the array of buffers

```
4.4.3.20 size_t coap_mem_medium_get_len ( void )
```

Get the length of each buffer in the medium memory allocator.

Returns

Length of each buffer

```
4.4.3.21 size_t coap_mem_medium_get_num ( void )
```

Get the number of buffers in the medium memory allocator.

Returns

Number of buffers

```
4.4.3.22 void* coap_mem_small_alloc ( size_t len )
```

Allocate a buffer from the small memory allocator.

**Parameters** 

```
in len Length of the buffer
```

Returns

Pointer to a buffer or NULL

4.4.3.23 int coap\_mem\_small\_create ( size\_t num, size\_t len )

Initialise the small memory allocator.

### **Parameters**

in	num	Number of buffers
in	len	Length of each buffer

### Returns

Operation status

### Return values

0	Success
<0	Error

4.4.3.24 void coap\_mem\_small\_free ( void \* buf )

Return a buffer back to the small memory allocator.

### **Parameters**

in	buf	Pointer to a buffer
----	-----	---------------------

4.4.3.25 char\* coap\_mem\_small\_get\_active ( void )

Get the active bitset from the small memory allocator.

### Returns

the active bitset from the small memory allocator

4.4.3.26 size\_t coap\_mem\_small\_get\_active\_len ( void )

Get the length of the active bitset from the small memory allocator.

### Returns

Length of the active bitset from the small memory allocator

```
4.4.3.27 char* coap_mem_small_get_buf ( void )
```

Get the array of buffers in the small memory allocator.

Returns

Pointer to the array of buffers

```
4.4.3.28 size_t coap_mem_small_get_len ( void )
```

Get the length of each buffer in the small memory allocator.

Returns

Length of each buffer

```
4.4.3.29 size_t coap_mem_small_get_num ( void )
```

Get the number of buffers in the small memory allocator.

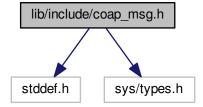

Returns

Number of buffers

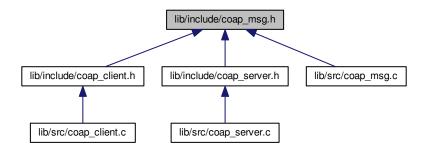

## 4.5 lib/include/coap\_msg.h File Reference

Include file for the FreeCoAP message parser/formatter library.

```
#include <stddef.h>
#include <sys/types.h>
Include dependency graph for coap_msg.h:
```

This graph shows which files directly or indirectly include this file:

### **Classes**

Option number enumeration.

### **Functions**

• int coap\_msg\_op\_num\_is\_recognized (unsigned num)

Check if option is recognized.

int coap\_msg\_op\_calc\_block\_szx (unsigned size)

Calculate block size exponent from block size.

• int coap\_msg\_op\_parse\_block\_val (unsigned \*num, unsigned \*more, unsigned \*size, const char \*val, unsigned len)

Parse Block1 or Block2 option value.

• int coap\_msg\_op\_format\_block\_val (char \*val, unsigned len, unsigned num, unsigned more, unsigned size)

Format Block1 or Block2 option value.

void coap\_msg\_gen\_rand\_str (char \*buf, size\_t len)

Generate a random string of bytes.

void coap\_msg\_create (coap\_msg\_t \*msg)

Initialise a message structure.

void coap\_msg\_destroy (coap\_msg\_t \*msg)

Deinitialise a message structure.

void coap msg reset (coap msg t \*msg)

Deinitialise and initialise a message structure.

unsigned coap\_msg\_check\_critical\_ops (coap\_msg\_t \*msg)

Check that all of the critical options in a message are recognized.

unsigned coap\_msg\_check\_unsafe\_ops (coap\_msg\_t \*msg)

Check that all of the unsafe options in a message are recognized.

int coap\_msg\_parse\_type\_msg\_id (char \*buf, size\_t len, unsigned \*type, unsigned \*msg\_id)

Extract the type and message ID values from a message.

• int coap\_msg\_parse\_block\_op (unsigned \*num, unsigned \*more, unsigned \*size, coap\_msg\_t \*msg, int type)

Find and parse a Block1 or Block2 option in a message.

• ssize\_t coap\_msg\_parse (coap\_msg\_t \*msg, char \*buf, size\_t len)

Parse a message.

int coap\_msg\_set\_type (coap\_msg\_t \*msg, unsigned type)

Set the type in a message.

int coap\_msg\_set\_code (coap\_msg\_t \*msg, unsigned code\_class, unsigned code\_detail)

Set the code in a message.

int coap\_msg\_set\_msg\_id (coap\_msg\_t \*msg, unsigned msg\_id)

Set the message ID in a message.

• int coap\_msg\_set\_token (coap\_msg\_t \*msg, char \*buf, size\_t len)

Set the token in a message.

int coap\_msg\_add\_op (coap\_msg\_t \*msg, unsigned num, unsigned len, const char \*val)

Add an option to a message structure.

• int coap\_msg\_set\_payload (coap\_msg\_t \*msg, char \*buf, size\_t len)

Set the payload in a message.

void coap\_msg\_clear\_payload (coap\_msg\_t \*msg)

Clear the payload in a message.

ssize\_t coap\_msg\_format (coap\_msg\_t \*msg, char \*buf, size\_t len)

Format a message.

int coap\_msg\_copy (coap\_msg\_t \*dst, coap\_msg\_t \*src)

Copy a message.

• size\_t coap\_msg\_uri\_path\_to\_str (coap\_msg\_t \*msg, char \*buf, size\_t len)

Convert the URI path in a message to a string representation.

### 4.5.1 Detailed Description

Include file for the FreeCoAP message parser/formatter library.

### 4.5.2 Macro Definition Documentation

4.5.2.1 #define coap\_msg\_block\_start\_to\_num( start, szx ) ((start) >> ((szx) + 4))

Convert a start byte value to a block num value

4.5.2.2 #define coap\_msg\_block\_szx\_to\_size( szx ) (1 << ((szx) + 4)))

Convert a block size exponent value to a size value

4.5.2.3 #define coap\_msg\_get\_code\_class( msg ) ((msg)->code\_class)

Get the code class from a message

4.5.2.4 #define coap\_msg\_get\_code\_detail( msg ) ((msg)->code\_detail)

Get the code detail from a message

4.5.2.5 #define coap\_msg\_get\_first\_op( msg ) ((msg)->op\_list.first)

Get the first option from a message

4.5.2.6 #define coap\_msg\_get\_msg\_id( msg ) ((msg)->msg\_id)

Get the message ID from message

4.5.2.7 #define coap\_msg\_get\_payload( msg ) ((msg)->payload)

Get the payload from a message

4.5.2.8 #define coap\_msg\_get\_payload\_len( msg ) ((msg)->payload\_len)

Get the payload length from a message

4.5.2.9 #define coap\_msg\_get\_token( msg ) ((msg)->token)

Get the token from a message

```
4.5.2.10 #define coap_msg_get_token_len( msg ) ((msg)->token_len)
Get the token length from a message
4.5.2.11 #define coap_msg_get_type( msg ) ((msg)->type)
Get the type from a message
4.5.2.12 #define coap_msg_get_ver( msg ) ((msg)->ver)
Get the version from a message
4.5.2.13 #define coap_msg_is_empty( msg ) (((msg)->code_class == 0) && ((msg)->code_detail == 0))
Indicate if a message is empty
4.5.2.14 #define COAP_MSG_MAX_BUF_LEN 1152
Maximum buffer length for header and payload
4.5.2.15 #define COAP_MSG_MAX_CODE_CLASS 7
Maximum code class
4.5.2.16 #define COAP_MSG_MAX_CODE_DETAIL 31
Maximum code detail
4.5.2.17 #define COAP_MSG_MAX_MSG_ID ((1 << 16) - 1)
Maximum message ID
4.5.2.18 #define COAP_MSG_MAX_PAYLOAD_LEN 1024
Maximum buffer length for payload
4.5.2.19 #define COAP_MSG_MAX_TOKEN_LEN 8
```

Maximum token length

4.5.2.20 #define coap\_msg\_op\_get\_len( op ) ((op)->len) Get the option length from an option 4.5.2.21 #define coap\_msg\_op\_get\_next( op ) ((op)->next) Get the next pointer from an option 4.5.2.22 #define coap\_msg\_op\_get\_num( op ) ((op)->num) Get the option number from an option 4.5.2.23 #define coap\_msg\_op\_get\_val( op ) ((op)->val) Get the option value from an option 4.5.2.24 #define COAP\_MSG\_OP\_MAX\_BLOCK\_SIZE (1 << 10) Maximum block size for a Block1 or Block2 option 4.5.2.25 #define COAP\_MSG\_OP\_MAX\_BLOCK\_VAL\_LEN 3 Maximum buffer length for a Block1 or Block2 option value 4.5.2.26 #define coap\_msg\_op\_num\_is\_critical( num ) ((num) & 1) Indicate if an option is critical 4.5.2.27 #define coap\_msg\_op\_num\_is\_unsafe( num ) ((num) & 2) Indicate if an option is unsafe to forward 4.5.2.28 #define coap\_msg\_op\_num\_no\_cache\_key( num ) ((num & 0x1e) == 0x1c) Indicate if an option is not part of the cache key

Generated by Doxygen

Set the option length in an option

4.5.2.29 #define coap\_msg\_op\_set\_len( op, len ) ((op)->len = (len))

```
4.5.2.30 #define coap_msg_op_set_next( op, next_op ) ((op)->next = (next_op))

Set the next pointer in an option

4.5.2.31 #define coap_msg_op_set_num( op, num ) ((op)->num = (num))

Set the option number in an option

4.5.2.32 #define coap_msg_op_set_val( op, val ) ((op)->val = (val))

Set the option value in an option

4.5.2.33 #define COAP_MSG_OP_URI_PATH_MAX_LEN 256

Maximum buffer length for a reconstructed URI path

4.5.2.34 #define COAP_MSG_VER 0x01

COAP version

4.5.3 Enumeration Type Documentation

4.5.3.1 enum coap_msg_class_t

Code class enumeration.
```

Enumerator

COAP\_MSG\_REQ Request
COAP\_MSG\_SUCCESS Success response
COAP\_MSG\_CLIENT\_ERR Client error response
COAP\_MSG\_SERVER\_ERR Server error response

4.5.3.2 enum coap\_msg\_client\_err\_t

Client error response code detail enumeration.

#### Enumerator

COAP\_MSG\_BAD\_REQ Bad request client error

COAP\_MSG\_UNAUTHORIZED Unauthorized client error

COAP\_MSG\_BAD\_OPTION Bad option client error

COAP\_MSG\_FORBIDDEN Forbidden client error

COAP\_MSG\_NOT\_FOUND Not found client error

COAP\_MSG\_METHOD\_NOT\_ALLOWED Method not allowed client error

COAP\_MSG\_NOT\_ACCEPTABLE Not acceptable client error

COAP\_MSG\_INCOMPLETE Request entity incomplete client error

COAP\_MSG\_PRECOND\_FAILED Precondition failed client error

COAP\_MSG\_REQ\_ENT\_TOO\_LARGE Request entity too large client error

COAP\_MSG\_UNSUP\_CONT\_FMT Unsupported content-format client error

4.5.3.3 enum coap\_msg\_method\_t

Request code detail enumeration.

#### Enumerator

COAP\_MSG\_GET Get request method
COAP\_MSG\_POST Post request method
COAP\_MSG\_PUT Put request method
COAP\_MSG\_DELETE Delete request method

4.5.3.4 enum coap\_msg\_op\_num\_t

Option number enumeration.

#### Enumerator

COAP\_MSG\_IF\_MATCH If-Match option number COAP\_MSG\_URI\_HOST URI-Host option number COAP\_MSG\_ETAG Entity-Tag option number COAP\_MSG\_IF\_NONE\_MATCH If-None-Match option number COAP\_MSG\_URI\_PORT URI-Port option number COAP\_MSG\_LOCATION\_PATH Location-Path option number COAP MSG URI PATH URI-Path option number COAP\_MSG\_CONTENT\_FORMAT Content-Format option number COAP\_MSG\_MAX\_AGE Max-Age option number COAP\_MSG\_URI\_QUERY URI-Query option number COAP\_MSG\_ACCEPT Accept option number COAP\_MSG\_LOCATION\_QUERY Location-Query option number COAP\_MSG\_BLOCK2 Block2 option number COAP\_MSG\_BLOCK1 Block1 option number COAP MSG SIZE2 Size2 option number COAP\_MSG\_PROXY\_URI Proxy-URI option number COAP\_MSG\_PROXY\_SCHEME Proxy-Scheme option number COAP\_MSG\_SIZE1 Size1 option number

4.5.3.5 enum coap\_msg\_server\_err\_t

Server error response code detail enumeration.

#### **Enumerator**

COAP\_MSG\_INT\_SERVER\_ERR Internal server error
COAP\_MSG\_NOT\_IMPL Not implemented server error
COAP\_MSG\_BAD\_GATEWAY Bad gateway server error
COAP\_MSG\_SERV\_UNAVAIL Service unavailable server error
COAP\_MSG\_GATEWAY\_TIMEOUT Gateway timeout server error
COAP\_MSG\_PROXY\_NOT\_SUP Proxying not supported server error

### 4.5.3.6 enum coap\_msg\_success\_t

Success response code detail enumeration.

#### Enumerator

```
COAP_MSG_CREATED Created success response
COAP_MSG_DELETED Deleted success response
COAP_MSG_VALID Valid success response
COAP_MSG_CHANGED Changed success response
COAP_MSG_CONTENT Content success response
COAP_MSG_CONTINUE Continue success response
```

```
4.5.3.7 enum coap_msg_type_t
```

Message type enumeration.

#### Enumerator

```
    COAP_MSG_CON Confirmable message
    COAP_MSG_NON Non-confirmable message
    COAP_MSG_ACK Acknowledgement message
    COAP_MSG_RST Reset message
```

### 4.5.4 Function Documentation

4.5.4.1 int coap\_msg\_add\_op ( coap\_msg\_t \* msg, unsigned num, unsigned len, const char \* val )

Add an option to a message structure.

### **Parameters**

in,out	msg	Pointer to a message structure
in	num	Option number
in	len	Option length
in	val	Pointer to a buffer containing the option value

### Returns

Operation status

### **Return values**

0	Success
<0	Error

4.5.4.2 unsigned coap\_msg\_check\_critical\_ops ( coap\_msg\_t \* msg )

Check that all of the critical options in a message are recognized.

### **Parameters**

in	msa	Pointer to message structure
	mog	Tomico to mossage structure

### Returns

Operation status or bad option number

### Return values

0	Success
>0	Bad option number

4.5.4.3 unsigned coap\_msg\_check\_unsafe\_ops (  $coap_msg_t * msg$  )

Check that all of the unsafe options in a message are recognized.

#### **Parameters**

in	msg	Pointer to message structure

### Returns

Operation status or bad option number

### **Return values**

0	Success	
>0	Bad option number	

4.5.4.4 void coap\_msg\_clear\_payload ( coap\_msg\_t \* msg )

Clear the payload in a message.

Free the buffer in the message structure containing the current payload if there is one.

in, out   msg   Po	nter to a message structure
--------------------	-----------------------------

4.5.4.5 int coap\_msg\_copy (  $coap_msg_t * dst$ ,  $coap_msg_t * src$  )

Copy a message.

### **Parameters**

in,out	dst	Pointer to the destination message structure
in	src	Pointer to the source message structure

### Returns

Operation status

### Return values

0	Success
<0	Error

4.5.4.6 void coap\_msg\_create ( coap\_msg\_t \* msg )

Initialise a message structure.

### **Parameters**

out	msg	Pointer to a message structure

4.5.4.7 void coap\_msg\_destroy ( coap\_msg\_t \* msg )

Deinitialise a message structure.

### **Parameters**

in,out	msg	Pointer to a message structure
--------	-----	--------------------------------

4.5.4.8 ssize\_t coap\_msg\_format (  $coap_msg_t * msg$ , char \* buf,  $size_t len$  )

Format a message.

in	msg	Pointer to a message structure
out	buf	Pointer to a buffer to contain the formatted message
in	len	Length of the buffer

### Returns

Length of the formatted message or error code

### Return values

ſ	>0	Length of the formatted message
ſ	<0	Error

4.5.4.9 void coap\_msg\_gen\_rand\_str ( char \* buf, size\_t len )

Generate a random string of bytes.

### **Parameters**

out	buf	Pointer to a buffer to store the random string
in	len	Length of the buffer

4.5.4.10 int coap\_msg\_op\_calc\_block\_szx ( unsigned size )

Calculate block size exponent from block size.

### **Parameters**

in	size	Block size
----	------	------------

### Returns

Block size exponent or error code

### Return values

>=0	Block size exponent
<0	Error

4.5.4.11 int coap\_msg\_op\_format\_block\_val ( char \* val, unsigned len, unsigned num, unsigned more, unsigned size )

Format Block1 or Block2 option value.

out	val	Pointer to a buffer to store the option value
in	len	Length of the buffer
in	num	Block number
in	more	More value
in	size	Block size

### Returns

Length of the formatted option value or error code

### Return values

>0	Length of the formatted option value
<0	Error

4.5.4.12 int coap\_msg\_op\_num\_is\_recognized ( unsigned *num* )

Check if option is recognized.

### **Parameters**

### Returns

Operation status

### Return values

1	Option is recognized
0	Option is not recognized

4.5.4.13 int coap\_msg\_op\_parse\_block\_val ( unsigned \* num, unsigned \* more, unsigned \* size, const char \* val, unsigned len )

Parse Block1 or Block2 option value.

### **Parameters**

out	num	Pointer to Block number
out	more	Pointer to More value
out	size	Pointer to Block size
in	val	Pointer to the option value
in	len	Option length

### Returns

Operation status

### Return values

0	Success
<0	Error

4.5.4.14 ssize\_t coap\_msg\_parse ( coap\_msg\_t \* msg, char \* buf, size\_t len )

Parse a message.

### **Parameters**

in,out	msg	Pointer to a message structure
in	buf	Pointer to a buffer containing the message
in	len	Length of the buffer

### Returns

Operation status

### **Return values**

0	Success
<0	Error

4.5.4.15 int coap\_msg\_parse\_block\_op ( unsigned \* num, unsigned \* more, unsigned \* size, coap\_msg\_t \* msg, int type )

Find and parse a Block1 or Block2 option in a message.

### **Parameters**

out	num	Pointer to Block number
out	more	Pointer to More value
out	size	Pointer to Block size (in bytes)
in	msg	Pointer to a message
in	type	Block option type: COAP_MSG_BLOCK1 or COAP_MSG_BLOCK2

### Returns

Operation status

### Return values

1	Block option not found
0	Success
<0	Error

4.5.4.16 int coap\_msg\_parse\_type\_msg\_id ( char \* buf, size\_t len, unsigned \* type, unsigned \* msg\_id )

Extract the type and message ID values from a message.

If a message contains a format error, this function will attempt to extract the type and message ID so that a reset message can be returned to the sender.

### **Parameters**

in	buf	Pointer to a buffer containing the message
in	len	Length of the buffer
out	type	Pointer to field to store the type value
out	msg← id	Pointer to a field to store the message ID value

### Returns

Operation status

### Return values

0	Success
<0	Error

4.5.4.17 void coap\_msg\_reset ( coap\_msg\_t \* msg )

Deinitialise and initialise a message structure.

### **Parameters**

in,out	msg	Pointer to a message structure
--------	-----	--------------------------------

 $4.5.4.18 \quad \text{int coap\_msg\_set\_code ( } \textbf{coap\_msg\_t} * \textit{msg, unsigned code\_class, unsigned code\_detail )}$ 

Set the code in a message.

### **Parameters**

out	msg	Pointer to a message structure
in	code_class	Code class
in	code_detail	Code detail

### Returns

Operation status

### **Return values**

0	Success
<0	Error

4.5.4.19 int coap\_msg\_set\_msg\_id ( coap\_msg\_t \* msg, unsigned msg\_id )

Set the message ID in a message.

### **Parameters**

out	msg	Pointer to a message structure
in	msg⇔	Message ID
	_id	

### Returns

Operation status

### **Return values**

0	Success
<0	Error

4.5.4.20 int coap\_msg\_set\_payload (  $coap_msg_t * msg$ , char \* buf,  $size_t len$  )

Set the payload in a message.

Free the buffer in the message structure containing the current payload if there is one, allocate a buffer to contain the new payload and copy the buffer argument into the new payload buffer.

### **Parameters**

in,out	msg	Pointer to a message structure
in	buf	Pointer to a buffer containing the payload
in	len	Length of the buffer

### Returns

Operation status

### Return values

0	Success
<0	Error

4.5.4.21 int coap\_msg\_set\_token ( coap\_msg\_t \* msg, char \* buf, size\_t len )

Set the token in a message.

### **Parameters**

out	msg	Pointer to a message structure
in	buf	Pointer to a buffer containing the token
in	len	Length of the buffer

### Returns

Operation status

### **Return values**

0	Success
<0	Error

4.5.4.22 int coap\_msg\_set\_type (  $coap_msg_t * msg$ , unsigned type )

Set the type in a message.

### **Parameters**

out	msg	Pointer to a message structure
in	type	Message type

### Returns

Operation status

### Return values

0	Success
<0	Error

 $4.5.4.23 \quad \text{size\_t coap\_msg\_uri\_path\_to\_str} \left( \begin{array}{ccc} \text{coap\_msg\_t} * \textit{msg}, \text{ char} * \textit{buf,} \text{ size\_t len} \end{array} \right)$ 

Convert the URI path in a message to a string representation.

in	msg	Pointer to a message structure
out	buf	Pointer to a buffer to hold the string
in	len	Length of the buffer

### Returns

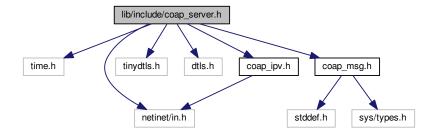

The number of bytes that would be written to the buffer it was large enough

# 4.6 lib/include/coap\_server.h File Reference

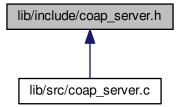

Include file for the FreeCoAP server library.

```
#include <time.h>
#include <netinet/in.h>
#include "tinydtls.h"
#include "dtls.h"
#include "coap_msg.h"
#include "coap_ipv.h"
```

Include dependency graph for coap\_server.h:

This graph shows which files directly or indirectly include this file:

## Classes

• struct coap\_server\_path

URI path structure.

struct coap\_server\_path\_list\_t

URI path list structure.

• struct coap\_server\_trans

Transaction structure.

· struct coap\_server

Server structure.

### **Macros**

```
    #define COAP_SERVER_NUM_TRANS 8
```

- #define COAP\_SERVER\_ADDR\_BUF\_LEN 128
- #define COAP\_SERVER\_DIAG\_PAYLOAD\_LEN 128
- #define coap\_server\_trans\_get\_type(trans) ((trans)->type)
- #define coap\_server\_trans\_get\_req(trans) (&(trans)->req)
- #define coap\_server\_trans\_get\_resp(trans) (&(trans)->resp)
- #define coap\_server\_trans\_get\_body(trans) ((trans)->body)
- #define coap\_server\_trans\_get\_body\_len(trans) ((trans)->body\_len)
- #define coap server trans get body end(trans) ((trans)->body end)
- #define coap\_server\_trans\_set\_body\_end(trans, i) ((trans)->body\_end = (i))

# **Typedefs**

typedef int(\* coap\_server\_trans\_handler\_t) (struct coap\_server\_trans \*trans, coap\_msg\_t \*req, coap\_msg ← t \*resp)

Server transaction handler callback function.

typedef struct coap\_server\_path coap\_server\_path\_t

URI path structure.

typedef struct coap\_server\_trans coap\_server\_trans\_t

Transaction structure.

• typedef struct coap\_server coap\_server\_t

Server structure.

### **Enumerations**

```
    enum coap_server_trans_type_t {
        COAP_SERVER_TRANS_REGULAR = 0, COAP_SERVER_TRANS_BLOCKWISE_GET = 1, COAP_SE
        RVER_TRANS_BLOCKWISE_PUT1 = 2, COAP_SERVER_TRANS_BLOCKWISE_PUT2 = 3,
        COAP_SERVER_TRANS_BLOCKWISE_POST1 = 4, COAP_SERVER_TRANS_BLOCKWISE_POST2 = 5
    }
```

Transaction type enumeration.

- enum coap\_server\_resp\_t { COAP\_SERVER\_PIGGYBACKED = 0, COAP\_SERVER\_SEPARATE = 1 }
   Response type enumeration.

Server DTLS state enumeration.

# **Functions**

int coap\_server\_trans\_handle\_blockwise (coap\_server\_trans\_t \*trans, coap\_msg\_t \*req, coap\_msg\_t \*resp, unsigned block1\_size, unsigned block2\_size, char \*body, size\_t body\_len, coap\_server\_trans\_handler\_
 t block rx)

Handle a library-level blockwise transfer.

• int coap\_server\_create (coap\_server\_t \*server, coap\_server\_trans\_handler\_t handle, const char \*host, const char \*port, const unsigned char \*ecdsa\_priv\_key, const unsigned char \*ecdsa\_pub\_key\_x, const unsigned char \*ecdsa\_pub\_key\_y, const unsigned char \*ecdsa\_access\_x, const unsigned char \*ecdsa\_access\_y, unsigned ecdsa\_access\_num, unsigned ecdsa\_size)

Initialise a server structure.

void coap\_server\_destroy (coap\_server\_t \*server)

Deinitialise a server structure.

unsigned coap\_server\_get\_next\_msg\_id (coap\_server\_t \*server)

Get a new message ID value.

int coap\_server\_add\_sep\_resp\_uri\_path (coap\_server\_t \*server, const char \*str)

Register a URI path that requires a separate response.

• int coap\_server\_run (coap\_server\_t \*server)

Run the server.

# 4.6.1 Detailed Description

Include file for the FreeCoAP server library.

### 4.6.2 Macro Definition Documentation

4.6.2.1 #define COAP\_SERVER\_ADDR\_BUF\_LEN 128

Buffer length for host addresses

4.6.2.2 #define COAP\_SERVER\_DIAG\_PAYLOAD\_LEN 128

Buffer length for diagnostic payloads

4.6.2.3 #define COAP\_SERVER\_NUM\_TRANS 8

Maximum number of active transactions per server

4.6.2.4 #define coap\_server\_trans\_get\_body( trans ) ((trans)->body)

Get the body of a blockwise transfer

 $4.6.2.5 \quad \text{\#define coap\_server\_trans\_get\_body\_end} (\quad \textit{trans} \ \ ) \ ((\text{trans}) - > \text{body\_end})$ 

Get the amount of relevant data in body of a blockwise transfer

4.6.2.6 #define coap\_server\_trans\_get\_body\_len( trans ) ((trans)->body\_len)

Get the length of the body of a blockwise transfer

4.6.2.7 #define coap\_server\_trans\_get\_req( trans ) (&(trans)->req)

Get the last request message received for this transaction

4.6.2.8 #define coap\_server\_trans\_get\_resp( trans ) (&(trans)->resp)

Get the last response message sent for this transaction

4.6.2.9 #define coap\_server\_trans\_get\_type( trans ) ((trans)->type)

Get the type of transaction

4.6.2.10 #define coap\_server\_trans\_set\_body\_end( trans, i) ((trans)->body\_end = (i))

Get the amount of relevant data in body of a blockwise transfer

# 4.6.3 Typedef Documentation

4.6.3.1 typedef int(\* coap\_server\_trans\_handler\_t) (struct coap\_server\_trans \*trans, coap\_msg\_t \*resp) \*resp)

Server transaction handler callback function.

### **Parameters**

in,out	trans	Pointer to a transaction structure
in	req	Pointer to the request message
out	resp	Pointer to the response message

### Returns

Operation status

## Return values

0	Success
<0	Error

## 4.6.4 Enumeration Type Documentation

4.6.4.1 enum coap\_server\_dtls\_state\_t

Server DTLS state enumeration.

### **Enumerator**

COAP\_SERVER\_DTLS\_UNCONNECTED DTLS session is not active
COAP\_SERVER\_DTLS\_CONNECTED DTLS session is active
COAP\_SERVER\_DTLS\_ALERT A DTLS alert message was received from the client

4.6.4.2 enum coap\_server\_resp\_t

Response type enumeration.

**Enumerator** 

**COAP\_SERVER\_PIGGYBACKED** Piggybacked response **COAP\_SERVER\_SEPARATE** Separate response

4.6.4.3 enum coap\_server\_trans\_type\_t

Transaction type enumeration.

### Enumerator

COAP\_SERVER\_TRANS\_BLOCKWISE\_GET Blockwise GET transaction

COAP\_SERVER\_TRANS\_BLOCKWISE\_PUT1 Request phase of a blockwise PUT transaction

COAP\_SERVER\_TRANS\_BLOCKWISE\_PUT2 Response phase of a blockwise PUT transaction

COAP\_SERVER\_TRANS\_BLOCKWISE\_POST1 Request phase of a Blockwise POST transaction

COAP\_SERVER\_TRANS\_BLOCKWISE\_POST2 Response phase of a Blockwise POST transaction

### 4.6.5 Function Documentation

4.6.5.1 int coap\_server\_add\_sep\_resp\_uri\_path ( coap\_server\_t \* server, const char \* str )

Register a URI path that requires a separate response.

## Parameters

in,out	server	Pointer to a server structure
in	str	String representation of a URI path

## Returns

Operation status

### Return values

0	Success
<0	Error

4.6.5.2 int coap\_server\_create ( coap\_server\_t \* server, coap\_server\_trans\_handler\_t handle, const char \* host, const char \* port, const unsigned char \* ecdsa\_priv\_key, const unsigned char \* ecdsa\_pub\_key\_x, const unsigned char \* ecdsa\_access\_x, const unsigned char \* ecdsa\_access\_y, unsigned ecdsa\_access\_num, unsigned ecdsa\_size )

Initialise a server structure.

### **Parameters**

out	server	Pointer to a server structure
in	handle	Call-back function to handle client requests
in	host	String containing the host address of the server
in	port	String containing the port number of the server
in	ecdsa_priv_key	Buffer containing the ECDSA private key
in	ecdsa_pub_key_x	Buffer containing the x component of the ECDSA public key
in	ecdsa_pub_key_y	Buffer containing the y component of the ECDSA public key
in	ecdsa_access_x	Buffer containing the x components of the ECDSA access control list
in	ecdsa_access_y	Buffer containing the y components of the ECDSA access control list
in	ecdsa_access_num	Number of entries in the ECDSA access control list
in	ecdsa_size	Size of an ECDSA component

### Returns

Operation status

### Return values

0	Success
<0	Error

4.6.5.3 void coap\_server\_destroy ( coap\_server\_t \* server )

Deinitialise a server structure.

### **Parameters**

in, out   server   Pointer to a s	server structure
-----------------------------------	------------------

4.6.5.4 unsigned coap\_server\_get\_next\_msg\_id ( coap\_server\_t \* server )

Get a new message ID value.

in,out	server	Pointer to a server structure
--------	--------	-------------------------------

### Returns

message ID value

4.6.5.5 int coap\_server\_run ( coap\_server\_t \* server )

Run the server.

Listen for incoming requests. For each request received, call the handle call-back function in the server structure and send the response to the client.

### **Parameters**

in, out server	Pointer to a server structure
----------------	-------------------------------

### Returns

Operation status

## **Return values**

0	Success
<0	Error

4.6.5.6 int coap\_server\_trans\_handle\_blockwise ( coap\_server\_trans\_t \* trans, coap\_msg\_t \* req, coap\_msg\_t \* resp, unsigned block1\_size, unsigned block2\_size, char \* body, size\_t body\_len, coap\_server\_trans\_handler\_t block\_rx )

Handle a library-level blockwise transfer.

Configure the transaction structure to do a library-level blockwise transfer. This function should be called by the application from the handle callback function.

## **Parameters**

in,out	trans	Pointer to a transaction structure
in	req	Pointer to the request message
out	resp	Pointer to the response message
in	block1_size	Preferred block1 size
in	block2_size	Preferred block2 size
in	body	Buffer containing the body
in	body_len	length of the buffer
in	block_rx	Callback function to be called when the body of a blockwise transfer has been fully
		received

## Returns

Operation status

### **Return values**

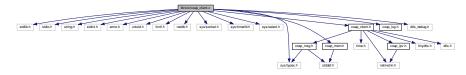

0	Success
<0	Error

# 4.7 lib/src/coap\_client.c File Reference

# Source file for the FreeCoAP client library.

```
#include <stdlib.h>
#include <stdio.h>
#include <string.h>
#include <stdint.h>
#include <errno.h>
#include <unistd.h>
#include <fcntl.h>

#include "coap_mem.h"
#include "coap_log.h"
#include "dtls_debug.h"
```

Include dependency graph for coap\_client.c:

## **Macros**

- #define COAP CLIENT ACK TIMEOUT SEC 2
- #define COAP\_CLIENT\_MAX\_RETRANSMIT 4
- #define COAP\_CLIENT\_RESP\_TIMEOUT\_SEC 30
- #define COAP CLIENT DTLS HANDSHAKE ATTEMPTS 60
- #define COAP\_CLIENT\_DTLS\_RETRANS\_TIMEOUT 1000

# **Functions**

 int coap\_client\_create (coap\_client\_t \*client, const char \*host, const char \*port, const unsigned char \*ecdsa\_priv\_key, const unsigned char \*ecdsa\_pub\_key\_x, const unsigned char \*ecdsa\_pub\_key\_y, const unsigned char \*ecdsa\_access\_x, const unsigned char \*ecdsa\_access\_y, unsigned ecdsa\_access\_num, unsigned ecdsa\_size)

Initialise a client structure.

void coap\_client\_destroy (coap\_client\_t \*client)

Deinitialise a client structure.

• int coap\_client\_exchange (coap\_client\_t \*client, coap\_msg\_t \*req, coap\_msg\_t \*resp)

Send a request to the server and receive the response.

• ssize\_t coap\_client\_exchange\_blockwise (coap\_client\_t \*client, coap\_msg\_t \*req, coap\_msg\_t \*resp, unsigned block1\_size, unsigned block2\_size, char \*body, size\_t body\_len, int have\_resp)

Exchange with the server using blockwise transfers.

### 4.7.1 Detailed Description

Source file for the FreeCoAP client library.

### 4.7.2 Macro Definition Documentation

4.7.2.1 #define COAP\_CLIENT\_ACK\_TIMEOUT\_SEC 2

Minimum delay to wait before retransmitting a confirmable message

4.7.2.2 #define COAP\_CLIENT\_DTLS\_HANDSHAKE\_ATTEMPTS 60

Maximum number of DTLS handshake attempts

4.7.2.3 #define COAP\_CLIENT\_DTLS\_RETRANS\_TIMEOUT 1000

Retransmission timeout (msec) for the DTLS handshake

4.7.2.4 #define COAP\_CLIENT\_MAX\_RETRANSMIT 4

Maximum number of times a confirmable message can be retransmitted

4.7.2.5 #define COAP\_CLIENT\_RESP\_TIMEOUT\_SEC 30

Maximum amount of time to wait for a response

## 4.7.3 Function Documentation

4.7.3.1 int coap\_client\_create ( coap\_client\_t \* client, const char \* host, const char \* port, const unsigned char \* ecdsa\_priv\_key, const unsigned char \* ecdsa\_pub\_key\_x, const unsigned char \* ecdsa\_pub\_key\_y, const unsigned char \* ecdsa\_access\_num, unsigned ecdsa\_size )

Initialise a client structure.

## **Parameters**

out	client	Pointer to a client structure	
in	host	Pointer to a string containing the host address of the server	
in	port	Port number of the server	
in	ecdsa_priv_key	Buffer containing the ECDSA private key	
in	ecdsa_pub_key_x	Buffer containing the x component of the ECDSA public key	
in	ecdsa_pub_key_y	Buffer containing the y component of the ECDSA public key	
in	ecdsa_access_x	Buffer containing the x components of the ECDSA access control list	
in	ecdsa_access_y	Buffer containing the y components of the ECDSA access control list	
in	ecdsa_access_num	Number of entries in the ECDSA access control list	
in	ecdsa_size	Size of an ECDSA component	

### Returns

Operation status

### **Return values**

0	Success
<0	Error

4.7.3.2 void coap\_client\_destroy ( coap\_client\_t \* client )

Deinitialise a client structure.

### **Parameters**

in,out	client	Pointer to a client structure
--------	--------	-------------------------------

4.7.3.3 int coap\_client\_exchange ( coap\_client\_t \* client, coap\_msg\_t \* req, coap\_msg\_t \* resp )

Send a request to the server and receive the response.

This function sets the message ID and token fields of the request message overriding any values set by the calling function.

### **Parameters**

in,out	client	Pointer to a client structure
in	req	Pointer to the request message
out	resp	Pointer to the response message

## Returns

Operation status

### Return values

0	Success
<0	Error

4.7.3.4 ssize\_t coap\_client\_exchange\_blockwise ( coap\_client\_t \* client, coap\_msg\_t \* req, coap\_msg\_t \* resp, unsigned block1\_size, unsigned block2\_size, char \* body, size\_t body\_len, int have\_resp )

Exchange with the server using blockwise transfers.

The calling application should not pass in a request message that contains a block1 or block2 option. This function will add block1 and block2 options internally. This function sets the message ID and token fields of the request message overriding any values set by the calling function.

### **Parameters**

in,out	client	Pointer to a client structure	
in	req	Pointer to the request message	
out	resp	Pointer to the response message	
in	block1_size	Block1 size	
in	block2_size	Block2 size	
in	body	Pointer to a buffer to hold the body	
in	body_len	Length of the buffer to hold the body	
in	have_resp	ave_resp Flag to indicate that the first response has already been received	

### Returns

Operation status

### **Return values**

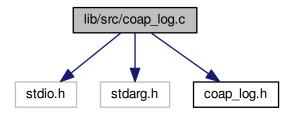

>=0	Length of the data received
<0	Error

# 4.8 lib/src/coap\_log.c File Reference

Source file for the FreeCoAP logging module.

```
#include <stdio.h>
#include <stdarg.h>
#include "coap_log.h"
```

Include dependency graph for coap\_log.c:

# **Functions**

- void coap\_log\_set\_level (coap\_log\_level\_t level)
   Set the log level.
- coap\_log\_level\_t coap\_log\_get\_level (void)

Get the log level.

void coap\_log\_error (const char \*msg,...)

Log an error message.

void coap\_log\_warn (const char \*msg,...)

Log a warning message.

• void coap\_log\_notice (const char \*msg,...)

Log an notice message.

void coap\_log\_info (const char \*msg,...)

Log an info message.

void coap\_log\_debug (const char \*msg,...)

Log a debug message.

# 4.8.1 Detailed Description

Source file for the FreeCoAP logging module.

## 4.8.2 Function Documentation

4.8.2.1 void coap\_log\_debug ( const char \* msg, ... )

Log a debug message.

in	msg	String containing format specifiers
in		arguments for the format specifiers

4.8.2.2 void coap\_log\_error ( const char \* msg, ... )

Log an error message.

### **Parameters**

in	msg	String containing format specifiers
in		arguments for the format specifiers

4.8.2.3 coap\_log\_level\_t coap\_log\_get\_level ( void )

Get the log level.

### Returns

The current log level

4.8.2.4 void coap\_log\_info ( const char \* msg, ... )

Log an info message.

### **Parameters**

in	msg	String containing format specifiers
in		arguments for the format specifiers

4.8.2.5 void coap\_log\_notice ( const char \* msg, ... )

Log an notice message.

### **Parameters**

in	msg	String containing format specifiers
in		arguments for the format specifiers

4.8.2.6 void coap\_log\_set\_level ( coap\_log\_level\_t level )

Set the log level.

Messages with a severity below this level will be filtered. Error messages cannot be filtered.

in	level	The new log level

- < Warning log level
- < Notice warning level
- < Informational warning level
- < Debug warning level

```
4.8.2.7 void coap_log_warn ( const char * msg, ... )
```

Log a warning message.

### **Parameters**

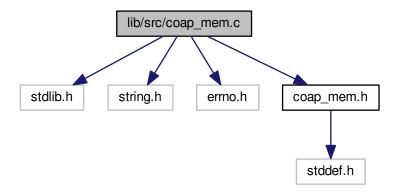

in	msg	String containing format specifiers
in		arguments for the format specifiers

# 4.9 lib/src/coap\_mem.c File Reference

Source file for the FreeCoAP memory allocator.

```
#include <stdlib.h>
#include <string.h>
#include <errno.h>
#include "coap_mem.h"
```

Include dependency graph for coap\_mem.c:

## **Functions**

• int coap\_mem\_create (coap\_mem\_t \*mem, size\_t num, size\_t len)

Initialise a memory allocator structure.

void coap\_mem\_destroy (coap\_mem\_t \*mem)

Deinitialise a memory allocator structure.

void \* coap mem alloc (coap mem t \*mem, size t len)

Allocate a buffer from a memory allocator.

void coap\_mem\_free (coap\_mem\_t \*mem, void \*buf)

Return a buffer back to a memory allocator.

• int coap mem small create (size t num, size t len)

Initialise the small memory allocator.

void coap\_mem\_small\_destroy (void)

Deinitialise the small memory allocator.

char \* coap mem small get buf (void)

Get the array of buffers in the small memory allocator.

size\_t coap\_mem\_small\_get\_num (void)

Get the number of buffers in the small memory allocator.

size\_t coap\_mem\_small\_get\_len (void)

Get the length of each buffer in the small memory allocator.

size\_t coap\_mem\_small\_get\_active\_len (void)

Get the length of the active bitset from the small memory allocator.

char \* coap\_mem\_small\_get\_active (void)

Get the active bitset from the small memory allocator.

void \* coap\_mem\_small\_alloc (size\_t len)

Allocate a buffer from the small memory allocator.

void coap mem small free (void \*buf)

Return a buffer back to the small memory allocator.

• int coap\_mem\_medium\_create (size\_t num, size\_t len)

Initialise the medium memory allocator.

void coap\_mem\_medium\_destroy (void)

Deinitialise the medium memory allocator.

char \* coap\_mem\_medium\_get\_buf (void)

Get the array of buffers in the medium memory allocator.

size\_t coap\_mem\_medium\_get\_num (void)

Get the number of buffers in the medium memory allocator.

size\_t coap\_mem\_medium\_get\_len (void)

Get the length of each buffer in the medium memory allocator.

size\_t coap\_mem\_medium\_get\_active\_len (void)

Get the length of the active bitset from the medium memory allocator.

char \* coap\_mem\_medium\_get\_active (void)

Get the active bitset from the medium memory allocator.

void \* coap\_mem\_medium\_alloc (size\_t len)

Allocate a buffer from the medium memory allocator.

void coap mem medium free (void \*buf)

Return a buffer back to the medium memory allocator.

int coap\_mem\_large\_create (size\_t num, size\_t len)

Initialise the large memory allocator.

· void coap mem large destroy (void)

Deinitialise the large memory allocator.

char \* coap\_mem\_large\_get\_buf (void)

Get the array of buffers in the large memory allocator.

size t coap mem large get num (void)

Get the number of buffers in the large memory allocator.

size\_t coap\_mem\_large\_get\_len (void)

Get the length of each buffer in the large memory allocator.

size\_t coap\_mem\_large\_get\_active\_len (void)

Get the length of the active bitset from the large memory allocator.

char \* coap\_mem\_large\_get\_active (void)

Get the active bitset from the large memory allocator.

void \* coap\_mem\_large\_alloc (size\_t len)

Allocate a buffer from the large memory allocator.

void coap\_mem\_large\_free (void \*buf)

Return a buffer back to the large memory allocator.

• int coap\_mem\_all\_create (size\_t small\_num, size\_t small\_len, size\_t medium\_num, size\_t medium\_len, size\_t large\_num, size\_t large\_len)

Initialise all memory allocators.

void coap\_mem\_all\_destroy (void)

Deinitialise all memory allocators.

# 4.9.1 Detailed Description

Source file for the FreeCoAP memory allocator.

## 4.9.2 Function Documentation

4.9.2.1 int coap\_mem\_all\_create ( size\_t small\_num, size\_t small\_len, size\_t medium\_num, size\_t medium\_len, size\_t large\_num, size\_t large\_len )

Initialise all memory allocators.

### **Parameters**

in	small_num	Number of small buffers
in	small_len	Length of each small buffer
in	medium_num	Number of medium buffers
in	medium_len	Length of each medium buffer
in	large_num	Number of large buffers
in	large_len	Length of each large buffer

### Returns

Operation status

### Return values

0	Success
<0	Error

4.9.2.2 void\* coap\_mem\_alloc ( coap\_mem\_t \* mem, size\_t len )

Allocate a buffer from a memory allocator.

### **Parameters**

in,out	mem	Pointer to a memory allocator
in	len	Length of the buffer

## Returns

Pointer to a buffer or NULL

4.9.2.3 int coap\_mem\_create ( coap\_mem\_t \* mem, size\_t num, size\_t len )

Initialise a memory allocator structure.

## **Parameters**

out	mem	Pointer to a memory allocator
in	num	Number of buffers
in	len	Length of each buffer

# Returns

Operation status

### Return values

0	Success
<0	Error

4.9.2.4 void coap\_mem\_destroy ( coap\_mem\_t \* mem )

Deinitialise a memory allocator structure.

## **Parameters**

in,out	mem	Pointer to a memory allocator
--------	-----	-------------------------------

4.9.2.5 void coap\_mem\_free ( coap\_mem\_t \* mem, void \* buf )

Return a buffer back to a memory allocator.

## **Parameters**

in,out	mem	Pointer to a memory allocator
in	buf	Pointer to a buffer

4.9.2.6 void\* coap\_mem\_large\_alloc ( size\_t len )

Allocate a buffer from the large memory allocator.

## **Parameters**

in	len	Length of the buffer
----	-----	----------------------

### Returns

Pointer to a buffer or NULL

4.9.2.7 int coap\_mem\_large\_create ( size\_t num, size\_t len )

Initialise the large memory allocator.

### **Parameters**

in	num	Number of buffers
in	len	Length of each buffer

## Returns

Operation status

### Return values

0	Success
<0	Error

4.9.2.8 void coap\_mem\_large\_free ( void \* buf )

Return a buffer back to the large memory allocator.

in <i>buf</i>	Pointer to a buffer
---------------	---------------------

```
4.9.2.9 char* coap_mem_large_get_active ( void )
```

Get the active bitset from the large memory allocator.

Returns

the active bitset from the large memory allocator

```
4.9.2.10 size_t coap_mem_large_get_active_len ( void )
```

Get the length of the active bitset from the large memory allocator.

Returns

Length of the active bitset from the large memory allocator

```
4.9.2.11 char* coap_mem_large_get_buf ( void )
```

Get the array of buffers in the large memory allocator.

Returns

Pointer to the array of buffers

```
4.9.2.12 size_t coap_mem_large_get_len ( void )
```

Get the length of each buffer in the large memory allocator.

Returns

Length of each buffer

```
4.9.2.13 size_t coap_mem_large_get_num ( void )
```

Get the number of buffers in the large memory allocator.

Returns

Number of buffers

```
4.9.2.14 void* coap_mem_medium_alloc ( size_t len )
```

Allocate a buffer from the medium memory allocator.

## **Parameters**

in	len	Length of the buffer
----	-----	----------------------

## Returns

Pointer to a buffer or NULL

4.9.2.15 int coap\_mem\_medium\_create ( size\_t num, size\_t len )

Initialise the medium memory allocator.

## **Parameters**

in	num	Number of buffers
in	len	Length of each buffer

## Returns

Operation status

### **Return values**

0	Success
<0	Error

4.9.2.16 void coap\_mem\_medium\_free ( void \* buf )

Return a buffer back to the medium memory allocator.

## **Parameters**

in	buf	Pointer to a buffer

4.9.2.17 char\* coap\_mem\_medium\_get\_active (void)

Get the active bitset from the medium memory allocator.

## Returns

the active bitset from the medium memory allocator

```
4.9.2.18 size_t coap_mem_medium_get_active_len ( void )
```

Get the length of the active bitset from the medium memory allocator.

Returns

Length of the active bitset from the medium memory allocator

```
4.9.2.19 char* coap_mem_medium_get_buf ( void )
```

Get the array of buffers in the medium memory allocator.

Returns

Pointer to the array of buffers

```
4.9.2.20 size_t coap_mem_medium_get_len ( void )
```

Get the length of each buffer in the medium memory allocator.

Returns

Length of each buffer

```
4.9.2.21 size_t coap_mem_medium_get_num ( void )
```

Get the number of buffers in the medium memory allocator.

Returns

Number of buffers

```
4.9.2.22 void* coap_mem_small_alloc ( size_t len )
```

Allocate a buffer from the small memory allocator.

**Parameters** 

```
in len Length of the buffer
```

Returns

Pointer to a buffer or NULL

4.9.2.23 int coap\_mem\_small\_create ( size\_t num, size\_t len )

Initialise the small memory allocator.

### **Parameters**

in	num	Number of buffers
in	len	Length of each buffer

## Returns

Operation status

# Return values

0	Success
<0	Error

4.9.2.24 void coap\_mem\_small\_free ( void \* buf )

Return a buffer back to the small memory allocator.

### **Parameters**

in	buf	Pointer to a buffer
----	-----	---------------------

4.9.2.25 char\* coap\_mem\_small\_get\_active ( void )

Get the active bitset from the small memory allocator.

## Returns

the active bitset from the small memory allocator

4.9.2.26 size\_t coap\_mem\_small\_get\_active\_len ( void )

Get the length of the active bitset from the small memory allocator.

## Returns

Length of the active bitset from the small memory allocator

```
4.9.2.27 char* coap_mem_small_get_buf ( void )
```

Get the array of buffers in the small memory allocator.

Returns

Pointer to the array of buffers

```
4.9.2.28 size_t coap_mem_small_get_len ( void )
```

Get the length of each buffer in the small memory allocator.

Returns

Length of each buffer

```
4.9.2.29 size_t coap_mem_small_get_num ( void )
```

Get the number of buffers in the small memory allocator.

Returns

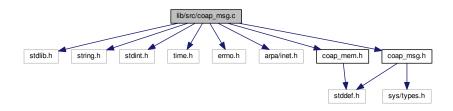

Number of buffers

# 4.10 lib/src/coap\_msg.c File Reference

Source file for the FreeCoAP message parser/formatter library.

```
#include <stdlib.h>
#include <string.h>
#include <stdint.h>
#include <time.h>
#include <errno.h>
#include <arpa/inet.h>
#include "coap_msg.h"
#include "coap_mem.h"
```

Include dependency graph for coap\_msg.c:

### **Macros**

- #define coap\_msg\_op\_list\_get\_first(list) ((list)->first)
- #define coap\_msg\_op\_list\_get\_last(list) ((list)->last)
- #define coap\_msg\_op\_list\_is\_empty(list) ((list)->first == NULL)

### **Functions**

• void coap\_msg\_gen\_rand\_str (char \*buf, size\_t len)

Generate a random string of bytes.

int coap\_msg\_op\_num\_is\_recognized (unsigned num)

Check if option is recognized.

• int coap\_msg\_op\_calc\_block\_szx (unsigned size)

Calculate block size exponent from block size.

int coap\_msg\_op\_parse\_block\_val (unsigned \*num, unsigned \*more, unsigned \*size, const char \*val, unsigned len)

Parse Block1 or Block2 option value.

• int coap\_msg\_op\_format\_block\_val (char \*val, unsigned len, unsigned num, unsigned more, unsigned size)

Format Block1 or Block2 option value.

void coap\_msg\_create (coap\_msg\_t \*msg)

Initialise a message structure.

void coap\_msg\_destroy (coap\_msg\_t \*msg)

Deinitialise a message structure.

void coap\_msg\_reset (coap\_msg\_t \*msg)

Deinitialise and initialise a message structure.

unsigned coap\_msg\_check\_critical\_ops (coap\_msg\_t \*msg)

Check that all of the critical options in a message are recognized.

unsigned coap\_msg\_check\_unsafe\_ops (coap\_msg\_t \*msg)

Check that all of the unsafe options in a message are recognized.

• int coap\_msg\_parse\_type\_msg\_id (char \*buf, size\_t len, unsigned \*type, unsigned \*msg\_id)

Extract the type and message ID values from a message.

• int coap\_msg\_parse\_block\_op (unsigned \*num, unsigned \*more, unsigned \*size, coap\_msg\_t \*msg, int type)

Find and parse a Block1 or Block2 option in a message.

• ssize t coap msg parse (coap msg t \*msg, char \*buf, size t len)

Parse a message.

int coap\_msg\_set\_type (coap\_msg\_t \*msg, unsigned type)

Set the type in a message.

• int coap\_msg\_set\_code (coap\_msg\_t \*msg, unsigned code\_class, unsigned code\_detail)

Set the code in a message.

• int coap\_msg\_set\_msg\_id (coap\_msg\_t \*msg, unsigned msg\_id)

Set the message ID in a message.

• int coap\_msg\_set\_token (coap\_msg\_t \*msg, char \*buf, size\_t len)

Set the token in a message.

• int coap\_msg\_add\_op (coap\_msg\_t \*msg, unsigned num, unsigned len, const char \*val)

Add an option to a message structure.

int coap\_msg\_set\_payload (coap\_msg\_t \*msg, char \*buf, size\_t len)

Set the payload in a message.

void coap msg clear payload (coap msg t \*msg)

Clear the payload in a message.

ssize\_t coap\_msg\_format (coap\_msg\_t \*msg, char \*buf, size\_t len)

Format a message.

int coap\_msg\_copy (coap\_msg\_t \*dst, coap\_msg\_t \*src)

Copy a message.

• size\_t coap\_msg\_uri\_path\_to\_str (coap\_msg\_t \*msg, char \*buf, size\_t len)

Convert the URI path in a message to a string representation.

# 4.10.1 Detailed Description

Source file for the FreeCoAP message parser/formatter library.

### 4.10.2 Macro Definition Documentation

```
4.10.2.1 #define coap_msg_op_list_get_first( list ) ((list)->first)
```

Get the first option from an option linked-list

```
4.10.2.2 #define coap_msg_op_list_get_last( list ) ((list)->last)
```

Get the last option in an option linked-list

```
4.10.2.3 #define coap_msg_op_list_is_empty( list ) ((list)->first == NULL)
```

Indicate whether or not an option linked-list is empty

## 4.10.3 Function Documentation

4.10.3.1 int coap\_msg\_add\_op ( coap\_msg\_t \* msg, unsigned num, unsigned len, const char \* val )

Add an option to a message structure.

### **Parameters**

in,out	msg	Pointer to a message structure
in	num	Option number
in	len	Option length
in	val	Pointer to a buffer containing the option value

### Returns

Operation status

### Return values

0	Success
<0	Error

Generated by Doxygen

4.10.3.2 unsigned coap\_msg\_check\_critical\_ops ( coap\_msg\_t \* msg )

Check that all of the critical options in a message are recognized.

### **Parameters**

			<b>.</b>
i	n	msg	Pointer to message structure

## Returns

Operation status or bad option number

### Return values

0	Success
>0	Bad option number

4.10.3.3 unsigned coap\_msg\_check\_unsafe\_ops (  $coap_msg_t * msg$  )

Check that all of the unsafe options in a message are recognized.

### **Parameters**

in	msg	Pointer to message structure
----	-----	------------------------------

## Returns

Operation status or bad option number

### **Return values**

0	Success	
>0	Bad option number	

4.10.3.4 void coap\_msg\_clear\_payload ( coap\_msg\_t \* msg )

Clear the payload in a message.

Free the buffer in the message structure containing the current payload if there is one.

in,out	msg	Pointer to a message structure

4.10.3.5 int coap\_msg\_copy (  $coap_msg_t * dst$ ,  $coap_msg_t * src$  )

Copy a message.

### **Parameters**

in,out	dst	Pointer to the destination message structure
in	src	Pointer to the source message structure

## Returns

Operation status

### Return values

0	Success
<0	Error

4.10.3.6 void coap\_msg\_create (  $coap_msg_t * msg$  )

Initialise a message structure.

### **Parameters**

	out	msg	Pointer to a message structure
--	-----	-----	--------------------------------

4.10.3.7 void coap\_msg\_destroy (  $coap_msg_t * msg$  )

Deinitialise a message structure.

### **Parameters**

in,out	msg	Pointer to a message structure
--------	-----	--------------------------------

4.10.3.8 ssize\_t coap\_msg\_format (  $coap_msg_t * msg$ , char \* buf,  $size_t len$  )

Format a message.

in	msg	Pointer to a message structure
out	buf	Pointer to a buffer to contain the formatted message
in	len	Length of the buffer

### Returns

Length of the formatted message or error code

## Return values

>0	Length of the formatted message
<0	Error

4.10.3.9 void coap\_msg\_gen\_rand\_str ( char \* buf, size\_t len )

Generate a random string of bytes.

### **Parameters**

out	buf	Pointer to a buffer to store the random string
in	len	Length of the buffer

4.10.3.10 int coap\_msg\_op\_calc\_block\_szx ( unsigned size )

Calculate block size exponent from block size.

# **Parameters**

in	size	Block size
----	------	------------

# Returns

Block size exponent or error code

## Return values

>=0	Block size exponent
<0	Error

4.10.3.11 int coap\_msg\_op\_format\_block\_val ( char \* val, unsigned len, unsigned num, unsigned more, unsigned size )

Format Block1 or Block2 option value.

out	val	Pointer to a buffer to store the option value
in	len	Length of the buffer
in	num	Block number
in	more	More value
in	size	Block size

## Returns

Length of the formatted option value or error code

# Return values

>0	Length of the formatted option value
<0	Error

4.10.3.12 int coap\_msg\_op\_num\_is\_recognized ( unsigned num )

Check if option is recognized.

### **Parameters**

in	num	Option number
----	-----	---------------

### Returns

Operation status

## Return values

1	Option is recognized
0	Option is not recognized

4.10.3.13 int coap\_msg\_op\_parse\_block\_val ( unsigned \* num, unsigned \* more, unsigned \* size, const char \* val, unsigned len )

Parse Block1 or Block2 option value.

### **Parameters**

out	num	Pointer to Block number
out	more	Pointer to More value
out	size	Pointer to Block size
in	val	Pointer to the option value
in	len	Option length

## Returns

Operation status

## Return values

0	Success
<0	Error

4.10.3.14 ssize\_t coap\_msg\_parse ( coap\_msg\_t \* msg, char \* buf, size\_t len )

Parse a message.

### **Parameters**

in,out	msg	Pointer to a message structure
in	buf	Pointer to a buffer containing the message
in	len	Length of the buffer

### Returns

Operation status

## **Return values**

0	Success
<0	Error

4.10.3.15 int coap\_msg\_parse\_block\_op ( unsigned \* num, unsigned \* more, unsigned \* size, coap\_msg\_t \* msg, int type )

Find and parse a Block1 or Block2 option in a message.

## **Parameters**

out	num	Pointer to Block number
out	more	Pointer to More value
out	size	Pointer to Block size (in bytes)
in	msg	Pointer to a message
in	type	Block option type: COAP_MSG_BLOCK1 or COAP_MSG_BLOCK2

# Returns

Operation status

## Return values

1	Block option not found	
0	Success	
<0	Error	

4.10.3.16 int coap\_msg\_parse\_type\_msg\_id ( char \* buf, size\_t len, unsigned \* type, unsigned \* msg\_id )

Extract the type and message ID values from a message.

If a message contains a format error, this function will attempt to extract the type and message ID so that a reset message can be returned to the sender.

### **Parameters**

in	buf	Pointer to a buffer containing the message
in	len	Length of the buffer
out	type	Pointer to field to store the type value
out	msg← id	Pointer to a field to store the message ID value

### Returns

Operation status

## **Return values**

0	Success
<0	Error

4.10.3.17 void coap\_msg\_reset ( coap\_msg\_t \* msg )

Deinitialise and initialise a message structure.

### **Parameters**

in,out	msg	Pointer to a message structure
--------	-----	--------------------------------

4.10.3.18 int coap\_msg\_set\_code (  $coap_msg_t * msg$ , unsigned  $code\_class$ , unsigned  $code\_detail$  )

Set the code in a message.

## **Parameters**

out	msg	Pointer to a message structure
in	code_class	Code class
in	code_detail	Code detail

# Returns

Operation status

### **Return values**

0	Success
<0	Error

4.10.3.19 int coap\_msg\_set\_msg\_id ( coap\_msg\_t \* msg, unsigned msg\_id )

Set the message ID in a message.

### **Parameters**

out	msg	Pointer to a message structure
in	msg⊷ _id	Message ID

### Returns

Operation status

### **Return values**

0	Success
<0	Error

4.10.3.20 int coap\_msg\_set\_payload (  $coap_msg_t * msg$ , char \* buf,  $size_t len$  )

Set the payload in a message.

Free the buffer in the message structure containing the current payload if there is one, allocate a buffer to contain the new payload and copy the buffer argument into the new payload buffer.

### **Parameters**

in,out	msg	Pointer to a message structure
in	buf	Pointer to a buffer containing the payload
in	len	Length of the buffer

## Returns

Operation status

# Return values

0	Success
<0	Error

4.10.3.21 int coap\_msg\_set\_token ( coap\_msg\_t \* msg, char \* buf, size\_t len )

Set the token in a message.

## **Parameters**

out	msg	Pointer to a message structure
in	buf	Pointer to a buffer containing the token
in	len	Length of the buffer

## Returns

Operation status

### Return values

0	Success
<0	Error

4.10.3.22 int coap\_msg\_set\_type (  $coap_msg_t * msg$ , unsigned type )

Set the type in a message.

## **Parameters**

out	msg	Pointer to a message structure
in	type	Message type

## Returns

Operation status

## Return values

0	Success
<0	Error

4.10.3.23 size\_t coap\_msg\_uri\_path\_to\_str ( coap\_msg\_t \* msg, char \* buf, size\_t len )

Convert the URI path in a message to a string representation.

in	msg	Pointer to a message structure
out	buf	Pointer to a buffer to hold the string
in	len	Length of the buffer

#### Returns

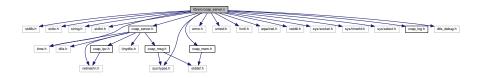

The number of bytes that would be written to the buffer it was large enough

# 4.11 lib/src/coap\_server.c File Reference

Source file for the FreeCoAP server library.

```
#include <stdlib.h>
#include <stdio.h>

### **Macros**

- #define COAP\_SERVER\_ACK\_TIMEOUT\_SEC 2
- #define COAP\_SERVER\_MAX\_RETRANSMIT 4
- #define COAP\_SERVER\_DTLS\_HANDSHAKE\_ATTEMPTS 60
- #define COAP\_SERVER\_DTLS\_RETRANS\_TIMEOUT 1000

### **Functions**

• int coap\_server\_trans\_handle\_blockwise (coap\_server\_trans\_t \*trans, coap\_msg\_t \*req, coap\_msg\_t \*resp, unsigned block1\_size, unsigned block2\_size, char \*body, size\_t body\_len, coap\_server\_trans\_handler\_
t block rx)

Handle a library-level blockwise transfer.

 int coap\_server\_create (coap\_server\_t \*server, coap\_server\_trans\_handler\_t handle, const char \*host, const char \*port, const unsigned char \*ecdsa\_priv\_key, const unsigned char \*ecdsa\_pub\_key\_x, const unsigned char \*ecdsa\_pub\_key\_y, const unsigned char \*ecdsa\_access\_x, const unsigned char \*ecdsa\_access\_y, unsigned ecdsa\_access\_num, unsigned ecdsa\_size) Initialise a server structure.

void coap\_server\_destroy (coap\_server\_t \*server)

Deinitialise a server structure.

unsigned coap\_server\_get\_next\_msg\_id (coap\_server\_t \*server)

Get a new message ID value.

• int coap\_server\_add\_sep\_resp\_uri\_path (coap\_server\_t \*server, const char \*str)

Register a URI path that requires a separate response.

• int coap\_server\_run (coap\_server\_t \*server)

Run the server.

# 4.11.1 Detailed Description

Source file for the FreeCoAP server library.

## 4.11.2 Macro Definition Documentation

4.11.2.1 #define COAP\_SERVER\_ACK\_TIMEOUT\_SEC 2

Minimum delay to wait before retransmitting a confirmable message

4.11.2.2 #define COAP\_SERVER\_DTLS\_HANDSHAKE\_ATTEMPTS 60

Maximum number of DTLS handshake attempts

4.11.2.3 #define COAP\_SERVER\_DTLS\_RETRANS\_TIMEOUT 1000

Retransmission timeout (msec) for the DTLS handshake DTLS priorities

4.11.2.4 #define COAP\_SERVER\_MAX\_RETRANSMIT 4

Maximum number of times a confirmable message can be retransmitted

### 4.11.3 Function Documentation

4.11.3.1 int coap\_server\_add\_sep\_resp\_uri\_path ( coap\_server\_t \* server, const char \* str )

Register a URI path that requires a separate response.

in,out	server	Pointer to a server structure
in	str	String representation of a URI path

### Returns

Operation status

## Return values

0	Success
<0	Error

4.11.3.2 int coap\_server\_create ( coap\_server\_t \* server, coap\_server\_trans\_handler\_t handle, const char \* host, const char \* port, const unsigned char \* ecdsa\_priv\_key, const unsigned char \* ecdsa\_pub\_key\_x, const unsigned char \* ecdsa\_access\_x, const unsigned char \* ecdsa\_access\_y, unsigned ecdsa\_access\_num, unsigned ecdsa\_size )

Initialise a server structure.

### **Parameters**

out	server	Pointer to a server structure	
in	handle	Call-back function to handle client requests	
in	host	String containing the host address of the server	
in	port	String containing the port number of the server	
in	ecdsa_priv_key	Buffer containing the ECDSA private key  Buffer containing the x component of the ECDSA public key	
in	ecdsa_pub_key_x		
in	ecdsa_pub_key_y	_key_y Buffer containing the y component of the ECDSA public key	
in	ecdsa_access_x	Buffer containing the x components of the ECDSA access control list	
in	ecdsa_access_y	dsa_access_y Buffer containing the y components of the ECDSA access control list	
in	ecdsa_access_num	cdsa_access_num  Number of entries in the ECDSA access control list	
in	ecdsa_size	cdsa_size Size of an ECDSA component	

## Returns

Operation status

## Return values

0	Success
<0	Error

4.11.3.3 void coap\_server\_destroy ( coap\_server\_t \* server )

Deinitialise a server structure.

in,out	server	Pointer to a server structure

4.11.3.4 unsigned coap\_server\_get\_next\_msg\_id ( coap\_server\_t \* server )

Get a new message ID value.

#### **Parameters**

in,out	server	Pointer to a server structure
--------	--------	-------------------------------

### Returns

message ID value

4.11.3.5 int coap\_server\_run ( coap\_server\_t \* server )

Run the server.

Listen for incoming requests. For each request received, call the handle call-back function in the server structure and send the response to the client.

#### **Parameters**

in, out se	<i>rver</i>   F	Pointer t	o a	server	structure
------------	-----------------	-----------	-----	--------	-----------

# Returns

Operation status

### **Return values**

0	Success
<0	Error

4.11.3.6 int coap\_server\_trans\_handle\_blockwise ( coap\_server\_trans\_t \* trans, coap\_msg\_t \* req, coap\_msg\_t \* resp, unsigned block1\_size, unsigned block2\_size, char \* body, size\_t body\_len, coap\_server\_trans\_handler\_t block\_rx )

Handle a library-level blockwise transfer.

Configure the transaction structure to do a library-level blockwise transfer. This function should be called by the application from the handle callback function.

## **Parameters**

in,out	trans	Pointer to a transaction structure
in	req	Pointer to the request message
out	resp	Pointer to the response message
in	block1_size	Preferred block1 size
in	block2_size	Preferred block2 size

94 File Documentation

# **Parameters**

in	body	Buffer containing the body
in	body_len	length of the buffer
in	block_rx	Callback function to be called when the body of a blockwise transfer has been fully
		received

## Returns

Operation status

## Return values

0	Success
<0	Error
